KATA PENGANTAR

Publikasi Profil Usaha Konstruksi Perorangan Tahun 2022 merupakan publikasi hasil pelaksanaan **Survei Usaha Konstruksi Perorangan Tahun 2023 (SKP23)** dengan target responden usaha konstruksi perorangan atau usaha konstruksi level mikro.

Publikasi ini menyajikan profil kegiatan usaha konstruksi perorangan. Data yang disajikan dalam publikasi ini terdiri atas banyaknya sampel usaha konstruksi perorangan, rata-rata banyaknya pekerja, hari orang, balas jasa dan upah, pendapatan, pengeluaran, permodalan, kepemilikan jaminan sosial dan sertifikat kompetensi, bimbingan usaha, bantuan yang diterima, penggunaan internet, wilayah pangsa pasar, kendala dan prospek usaha konstruksi perorangan. Variabel-variabel tersebut menjadi indikator aktivitas konstruksi, khususnya jasa konstruksi perorangan. Data disajikan menurut Kode Klasifikasi Baku Lapangan Usaha Indonesia (KBLI) 2020 dua-digit dan menurut provinsi.

Pada kesempatan ini kami mengucapkan terima kasih dan penghargaan kepada semua pihak yang terlibat pada pekerjaan lapangan, pengolahan, dan diseminasi data. Penghargaan sepenuhnya juga diberikan kepada pengusaha konstruksi yang telah membantu kelancaran pelaksanaan survei tersebut.

Jakarta, November 2023
Plt. Kepala Badan Pusat Statistik

Amalia Adininggar Widyasanti

PREFACE

Profile of Micro-Construction Establishment 2022 is a result of the 2023 **Micro-Construction Establishment Survey (SKP23)**, which covered household/micro-construction establishments as survey respondents.

This publication provides the micro-construction establishment profile activity. Depicted data in this publication involves the number of micro-construction samples, average workers, man-days, compensation and wages, output and input, capital source, social security and competency certificate ownership, establishment guidance support, internet use, market distribution area, and micro-construction establishment's constraints and prospects. Those variables become construction activity indicators, especially for micro-construction services. Data is detailedly provided to the 2020 Indonesia's 2-digit ISIC and provinces.

Finally, we would like to express our gratitude and honour to all participants who have supported in collecting, processing, and disseminating data. Our full gratitude is also given to all construction establishments who have supported providing data for the survey.

Jakarta, November 2023
Acting of Chief Statistician

Amalia Adininggar Widayanti

PENJELASAN *EXPLANATION*

1.1 PENDAHULUAN

Publikasi Profil Usaha Konstruksi Perorangan 2022 merupakan hasil dari pengolahan data Survei Usaha Konstruksi Perorangan 2023 (SKP23). Survei usaha konstruksi perorangan 2023 ini untuk ke tujuh kali dilaksanakan di Indonesia. Sebelumnya pengumpulan data usaha konstruksi perorangan terintegrasi pada setiap sensus ekonomi. SKP23 dilaksanakan di 514 kabupaten/kota yang tersebar di 34 provinsi. Adapun banyaknya target sampel sebanyak 23.750 usaha konstruksi perorangan yang tersebar di 2.510 desa/kelurahan.

Cakupan Survei Konstruksi Perorangan 2023 adalah usaha perorangan yang aktif berkegiatan di sektor konstruksi (KBLI Kode F) termasuk usaha yang berbadan hukum perseroan perorangan, dan mengerjakan proyek konstruksi secara borongan selama tahun 2022. Referensi waktu SKP23 adalah 1 Januari - 31 Desember 2022.

1.2 KONSEP DAN DEFINISI

Konstruksi adalah suatu kegiatan yang hasil akhirnya berupa bangunan/konstruksi yang menyatu dengan lahan tempat kedudukannya. Kegiatan konstruksi mencakup pekerjaan baru, perbaikan, penambahan dan perubahan, pendirian prafabrikasi bangunan atau struktur di lokasi proyek, konstruksi yang bersifat sementara, dan juga pembongkaran bangunan. Hasil kegiatan antara lain: gedung, jalan, jembatan, rel dan jembatan kereta api, terowongan, bangunan air dan drainase, bangunan sanitasi, bandara, jaringan listrik dan telekomunikasi, dan lain-lain.

1.1 INTRODUCTION

The Profile of Micro-Construction Establishment 2022 is the result of data processing of the 2023 Micro-Construction Establishment Survey (SKP23). The 2023 Micro-Construction Establishment Survey is the seventh time it has been carried out in Indonesia. Previously, data collection for micro-construction establishment was integrated in Economics Census. SKP23 was implemented in 514 regencies/ municipalities in 34 provinces. The number of target samples is 23,750 micro-construction establishments in 2,510 villages/kelurahan.

Coverage of The 2023 Micro-Construction Establishment Survey are individual establishments that are actively doing activities in the construction sector (ISIC Code F), including establishments that are incorporated as individually owned establishments, and work on lump sum construction projects during 2022. The time reference of SKP23 is Januari, 1st until December, 31th 2022.

1.2 CONCEPTS AND DEFINITIONS

Construction is an activity which its end result is a building or construction attached to the land where it is located. It also includes special construction activities, such as land preparation, electrical installation and building completion activities, and other construction activities. The results of construction activities include buildings, roads, bridges, railways and railroad bridges, tunnels, water and drainage structures, sanitation buildings, airports, ports, electrical and telecommunication network, etc.

Usaha konstruksi perorangan adalah usaha konstruksi mikro milik orang/perorangan dan/atau badan usaha perorangan. Cakupan survei SKP23 juga termasuk usaha berbadan hukum Perseroan Perorangan. Perseroan Perorangan adalah suatu badan hukum perorangan yang didirikan oleh hanya 1 orang perseorangan dan memenuhi kriteria Usaha Mikro dan Kecil sebagaimana diatur dalam Undang-Undang Nomor 11 Tahun 2020 tentang Cipta Kerja.

Bidang Pekerjaan adalah pengelompokan kegiatan konstruksi berdasarkan golongan 2 digit KBLI 2020, yaitu: Konstruksi Gedung (41), Konstruksi Sipil (42), dan Konstruksi Khusus (43). Bidang pekerjaan usaha konstruksi perorangan ditentukan dari pengakuan responden atau yang biasa dikerjakan/spesialisasi.

Bouwheer adalah pemilik/investor pemberi perintah untuk melaksanakan pekerjaan konstruksi.

Borongan adalah perjanjian antara pemilik pekerjaan (bouwheer) dengan pemborong umum yang bertanggung jawab dalam pelaksanaan seluruh kegiatan proyek konstruksi berdasarkan hasil kerja yang dihitung per satuan hasil.

Sub-kontrak adalah perjanjian antara pemborong dengan pemborong lain atau pemilik yang biasanya mengerjakan sebagian dari suatu proyek konstruksi.

Nilai Borongan adalah nilai nominal pekerjaan yang disepakati antara pemborong dengan pemilik atau pemborong lain.

Pekerja adalah semua orang yang pada saat pencacahan bekerja di perusahaan, baik pekerja teknik maupun pekerja nonteknik.

***Micro-construction establishment** is the micro-construction business owned by individuals and/or individual business entities. The scope of the SKP23 survey also includes individually owned establishments. Individually owned establishments is an individual legal entity founded by a single individual and meets the criteria for Micro or Small Enterprises as stipulated in Law Number 11 of 2020 concerning Job Creation.*

***Business Activities** are grouping of construction activities based on the 2-digit 2020 ISIC group, namely construction of buildings (ISIC 41), civil engineering (ISIC 42), and specialized construction activities (ISIC 43). The field of work for an micro-construction establishment is determined by the respondent's statement or what the entrepreneur usually does or specializes with.*

***Bouwheer** is the owner/investor giving the orders to carry out the construction work.*

***A lump sum contract** is an agreement between the owner of the work (bouwheer) and the general contractor who is responsible for the implementation of all construction project activities based on work results calculated per unit of production.*

***A sub-contract** is an agreement between a contractor and another contractor or owner who usually works on part of a construction project.*

***Lump sum contract value** is the nominal value of the work agreed between the contractor and the owner or other contractor.*

***Worker** is a person who works in an establishment at the time of enumeration, which includes technical worker and nontechnical worker.*

Pekerja tetap adalah pekerja yang bekerja pada perusahaan/usaha yang menerima upah/gaji secara tetap, tidak tergantung pada presensi/kehadiran pekerja tersebut.

Pekerja kontrak adalah pekerja yang bekerja dengan perjanjian tertentu dan tidak mendapatkan kesempatan untuk mengikuti jenjang karir yang berlaku di perusahaan.

Pekerja harian adalah pekerja dibayar berdasarkan jumlah hari kerjanya dan tidak terikat secara tetap dengan perusahaan/usaha. Mereka hanya bekerja selama pekerjaan/proyek dan setelah selesai maka secara otomatis mereka tidak mempunyai hubungan kerja.

Hari-orang adalah jumlah hari dan orang yang dibutuhkan untuk menyelesaikan satu pekerjaan.

Balas jasa dan upah adalah seluruh pengeluaran yang dibayarkan kepada pekerja tetap dan pekerja harian berupa upah gaji, upah lembur, hadiah, bonus, dana pensiun, tunjangan kecelakaan, dan pengeluaran lainnya yang dibayarkan dalam bentuk uang maupun barang sebagai balas jasa dan upah.

Pendapatan meliputi pendapatan utama dari kegiatan konstruksi dan pendapatan dari kegiatan lainnya.

Pendapatan lainnya adalah pendapatan dari kegiatan lain seperti pendapatan desain gambar perencanaan konstruksi, penjualan sisa bahan material, pendapatan dari sewa alat/perlengkapan/lahan/bangunan, pendapatan dari dividen, bunga, klaim asuransi dll.

Nilai konstruksi yang diselesaikan adalah nilai pekerjaan yang telah diselesaikan oleh pihak pemborong menurut realisasi proyek yang telah diselesaikan dalam jangka waktu tertentu, berdasarkan nilai kontrak antara pemilik dengan kontraktor.

Permanent worker is a worker who works in an establishment/business and receives fixed salary without depending on his presence recordy.

Contract worker is a worker who works based on a particular agreement and has no career path in the establishment.

Daily worker is a worker who are paid based on the number of days they work, works during the project and has no permanent relationship with the company when the project has been completed.

Man-days is the number of days and workers needed to finish a job.

Compensation and wages is expenditures incurred for both permanent and daily workers in the form of wages/salaries, overtime payments, gifts, bonuses, pension benefits, accident allowances and other expenditures either in the form of money or goods.

Income includes the main income from construction activities and other activity income.

Other income is income from other activities such as income from construction planning design drawings, sales of remaining materials, income from equipment/land/building rental, dividends, interest, insurance claims etc.

The value of construction completed is the total value of works completed by a contractor based on the progress of a project in a certain period of time, based on the contract value between bowheer and contractor.

Biaya/pengeluaran operasional adalah biaya yang dikeluarkan untuk menunjang kegiatan usaha/perusahaan meliputi bahan bakar dan pelumas, air, listrik, alat tulis kantor, pemeliharaan dan perbaikan kecil barang modal, angkutan, pengiriman, pos dan telekomunikasi, bunga atas pinjaman, dan lainnya seperti jasa konsultan konstruksi, promosi usaha dll.

Bimbingan/pelatihan/penyuluhan adalah bimbingan/pelatihan/penyuluhan yang diikuti pekerja dilakukan dengan maksud meningkatkan ketrampilan atau kemampuan berusaha yang berhubungan dengan usaha yang dilakukan. Bimbingan/pelatihan/penyuluhan meliputi manajerial terkait dengan pengelolaan usaha, teknik konstruksi, pemasaran dan lainnya.

Internet adalah sebuah sistem jaringan komunikasi global yang menghubungkan komputer dan jaringan komputer di seluruh dunia secara global.

1.3 PENYAJIAN DATA

Publikasi Usaha Konstruksi Perorangan 2022 disajikan dalam bentuk data profil usaha konstruksi perorangan. Data yang ditampilkan berupa nilai persentase, nilai rata-rata, nilai median, indeks persepsi bisnis, maupun indeks masalah bisnis usaha konstruksi perorangan. Jika jumlah sampel yang terpilih pada salah satu bidang pekerjaan tidak mencukupi, maka data akan disajikan dalam bentuk N/A.

1.4 PENGHITUNGAN INDEKS

Metode indeks *diffusion* digunakan untuk menghitung indeks kondisi dan prospek bisnis pengusaha. Formula dari indeks *diffusion* sebagai berikut:

$$ID = \%meningkat + \frac{\%tetap}{2} \quad (1.1)$$

Operational costs/expenses are costs incurred to support establishment activities including fuel and lubricants, clean water, electricity, office stationery, maintenance and small repairs of capital goods, transportation, delivery, post and telecommunications, loan interest, and others such as construction consulting services, business promotion etc.

Guidance/training/counseling is guidance/training/counseling followed by workers carried out with the intention of improving the skills or abilities of businesses related to the business. Guidance/training/counseling includes managerial matters related to business management, construction techniques, marketing and others.

Internet is a global communication network system that connects computers and computer networks around the world globally.

1.3 THE PRESENTATION OF DATA

The 2022 Profile of Micro-Construction Establishment Publication is presented in the form of micro-construction establishment profile data. The data displayed is in the form of percentage values, average values, median values, business perception indices, and business problem indices for micro-construction establishment. If the number of samples selected for one of the main activities is insufficient, then the data will be presented in the form of N/A.

1.4 CALCULATION INDICES

Diffusion index method is used to calculate condition and prospect. The formula is as follows:

$$ID = \%increase + \frac{\%same}{2} \quad (1.1)$$

dimana:

- ID = indeks *diffusion*
%meningkat = persentase pengusaha yang menyatakan kondisi usahanya pada periode tertentu meningkat dibanding dengan periode sebelumnya
% tetap = persentase pengusaha yang menyatakan kondisi usahanya pada periode tertentu tetap dibanding dengan periode sebelumnya

where:

- ID = *diffusion indices*
%increase = *percentage of responses reporting "increase" compare to previous period*
%same = *percentage of responses reporting "same" compare to previous period*

Nilai Indeks *Diffusion* (ID) akan terletak dalam range 0 - 100 % yang diinterpretasikan sebagai berikut:

Diffusion index (ID) values range from 0 to 100 percent which can be interpreted as follows:

- ID = 100% : Semua pengusaha menyatakan kondisi usahanya meningkat
ID > 50% : Jumlah pengusaha yang menyatakan kondisi usahanya meningkat lebih banyak dibandingkan yang menyatakan menurun, umumnya pengusaha cenderung optimis akan kondisi usahanya
ID = 50 % : Jumlah pengusaha yang menyatakan kondisi usahanya meningkat sama dengan yang menyatakan menurun
ID < 50% : Jumlah pengusaha yang menyatakan kondisi usahanya menurun lebih banyak dibandingkan yang menyatakan meningkat, umumnya pengusaha cenderung pesimis akan kondisi usahanya
ID = 0 % : Semua pengusaha menyatakan kondisi usahanya menurun

- ID = 100% : *all the response stated that the business condition are "increase"*
ID > 50% : *most of the response (more than 50%) stated that the business condition are "increase". They are optimist about the business*
ID = 50 % : *number of response "increase" and "decrease" are equal*
ID < 50% : *most of the response (more than 50%) stated that the business condition are "decrease". They are pessimist about the business*
ID = 0 % : *all the response stated that the business condition are "decrease".*

Penghitungan ID menurut persamaan (1.2) dilakukan untuk setiap kondisi/variabel, kemudian dihitung indeks komposit ID-nya, yaitu sebagai berikut:

ID that calculated by equation (1.2) is calculated for each business condition/variable. Then, the composite indices for the ID is calculated as follows :

$$ID_c = \frac{\sum_{i=1}^v ID_i}{v} \quad (1.2)$$

dimana:

ID_c = indeks *diffusion* komposit

ID_i = indeks *diffusion* kondisi/variabel ke- i

v = jumlah kondisi/variabel

where:

ID_c = *diffusion's composite indices*

ID_i = *diffusion's composite indices for particular condition/variable*

v = *number of condition/variable*

INDEKS MASALAH BISNIS

Metode indeks masalah bisnis digunakan untuk menghitung kondisi derajat kegawatan kinerja pengusaha. Formula dari indeks masalah bisnis sebagai berikut:

BUSINESS PROBLEM INDICES

Business problems index is used to measure the degree of problems faced by businessman. The formula to calculate business index is as follows:

$$T_v = \sum_{i=1}^n S_{vi} \quad (2.1)$$

$$IM_v = \frac{100\% T_v}{c - 1 n} \quad (2.2)$$

$$IMB = \frac{\sum_{v=1}^k T_v \times IM_v}{\sum_{v=1}^k T_v} \quad (2.3)$$

dimana:

IMB = indeks masalah bisnis

IM_v = indeks masalah untuk kondisi ke- v

T_v = total nilai skor untuk kondisi ke- v

S_{vi} = nilai skor untuk kondisi ke- v pada perusahaan ke- i

c = jumlah kriteria jawaban yang digunakan

n = jumlah sampel perusahaan

k = jumlah variabel pembentuk indeks masalah bisnis

where:

IMB = *business problem indices*

IM_v = *problem indices of v^{th} condition*

T_v = *total score of v^{th} condition*

S_{vi} = *score of v^{th} condition of i^{th} establishment*

c = *number of answer criteria used*

n = *number of sample establishments*

k = *number of business problem indices forming variable*

Nilai IM_v dan IMB akan terletak dalam range 0 - 100 dan diinterpretasikan sebagai berikut:

IM_v and IMB values range from 0 to 100 and can be interpreted as follows:

IM_v atau $IMB = 0\%$: tidak bermasalah

IM_v or $IMB = 0\%$: not problematic

$0\% < IM_v$ atau $IMB \leq 50\%$: sedikit bermasalah

$0\% < IM_v$ or $IMB \leq 50\%$: less problematic

$50\% < IM_v$ atau $IMB \leq 100\%$: bermasalah

$50\% < IM_v$ or $IMB \leq 100\%$: problematic

<https://www.bps.go.id>

ULASAN SINGKAT REVIEW

2.1 Latar Belakang

Konstruksi merupakan salah satu bidang usaha yang memiliki nilai strategis dalam perekonomian. Sektor konstruksi memberikan nilai tambah sebesar 9,86% terhadap Produk Domestik Bruto (PDB) pada triwulan III-2023. Sektor konstruksi menghasilkan produk-produk bangunan (infrastruktur), baik yang merupakan *public goods* seperti jalan, jembatan, pelabuhan, bendungan, jaringan irigasi, dan lain-lain maupun *private goods* seperti rumah hunian, hotel, kondominium, *shopping malls*, pabrik, dan lain sebagainya.

Aktivitas konstruksi di tiap daerah untuk mewujudkan berbagai bangunan tersebut berkontribusi menambah besaran nilai tambah baik secara regional (PDRB) maupun secara nasional (PDB). Produk-produk sektor konstruksi pada umumnya menjadi masukan (*input*) bagi sektor-sektor perekonomian lainnya, dan berperan penting dalam pembentukan *gross fixed capital formation (GFCF)*. Berbagai jenis infrastruktur tersebut, dalam wujud aset fisik, berfungsi memberi layanan bagi berbagai aktivitas sosial-ekonomi masyarakat, serta menjadi *social overhead capital* bagi pembangunan dan sekaligus pembentuk lingkungan terbangun (*built environment*) yang menandakan tingkatan peradaban suatu bangsa.

Proyek-proyek fisik yang bernilai besar di pemerintah maupun swasta umumnya ditangani perusahaan berskala besar, sedangkan untuk perusahaan skala menengah dan kecil

2.1 Background

Construction is a business field that has strategic value in the economy. The construction sector provided a value-added of 9,86% to the Gross Domestic Product (GDP) in 2023 quarter III. The construction sector produces building (infrastructure) products: public goods such as roads, bridges, ports, dams, irrigation networks, and others, as well as private goods such as residential houses, hotels, condominiums, shopping malls, factories, etc.

Construction activities in each region to realize the various buildings contribute to the value-added regionally (GRDP) and nationally (GDP). The products of the construction sector generally become inputs for other economic sectors and play an essential role in the formation of gross fixed capital formation (GFCF). These various types of infrastructure, in the form of physical assets, have the function of providing services for various socio-economic activities of the community, as well as being a social overhead capital for development and, at the same time, forming a built environment that indicates the level of civilization of a nation.

Large-scale establishments generally handle large-scale physical projects in the government and the private sector. In contrast, medium and small-scale establishments work

mengerjakan bagian dari suatu proyek, sebagai subkontraktor. Adapun untuk melayani kebutuhan pembangunan infrastruktur rumah tangga biasanya dikerjakan oleh usaha konstruksi perorangan. Usaha konstruksi perorangan berdasarkan hasil Sensus Ekonomi 2006 mempunyai populasi yang cukup besar dibandingkan dengan usaha konstruksi yang sudah berbadan hukum atau perusahaan konstruksi. Oleh karena informasi mengenai populasi dan karakteristik lainnya belum tersedia secara berkala setiap tahunnya, maka sejak tahun 2012 hingga tahun 2016 Badan Pusat Statistik mengadakan pendataan usaha konstruksi perorangan melalui Survei Usaha Konstruksi Tidak Berbadan Hukum (VTBH). Pada tahun 2017, Survei Usaha Konstruksi Perorangan terintegrasi dalam Sensus Ekonomi 2016 Lanjutan kategori UMK.

Dari hasil pendataan sebelumnya tersebut, perubahan karakteristik usaha konstruksi perorangan tidak banyak berubah setiap tahunnya, sehingga selanjutnya Survei Usaha Konstruksi Perorangan dilakukan setiap 3 tahun sekali. Pada tahun 2023, Badan Pusat Statistik kembali mengadakan pendataan usaha konstruksi perorangan melalui Survei Usaha Konstruksi Perorangan (SKP23).

2.2 Sampel Usaha Konstruksi Perorangan

Berdasarkan hasil pendataan Survei Usaha Konstruksi Perorangan 2023 yang tersebar di 34 provinsi di Indonesia diperoleh 23.608 sampel usaha, yang terdiri dari usaha pekerjaan gedung 15.735 usaha (66,65 persen), pekerjaan sipil 2.803 usaha (11,87 persen), dan 5.070 usaha (21,48 persen) yang mengerjakan pekerjaan khusus. Banyaknya sampel usaha konstruksi perorangan menurut provinsi dan bidang pekerjaan dapat dilihat pada Tabel 2 dan Gambar 1.

as subcontractors on part of a project. As for serving the needs of household infrastructure development, it is usually done by individual construction establishments. Based on the 2006 Economic Census results, micro-construction establishments have a reasonably large population compared to non-micro-construction establishments. Because information on population and other characteristics has yet to be available periodically every year, from 2012 to 2016, Statistics Indonesia collected data through the Survey of Construction Establishments Without Legal Entity (VTBH). In 2017, the Micro-Construction Establishment Survey was integrated into the Advanced 2016 Economic Census for the MSME category.

The results of the previous data collection noted that changes in the characteristics of the micro-construction establishment mostly stayed the same each year. Hence, the Micro-Construction Establishment Survey was then conducted every three years. In 2023, Statistics Indonesia collected data for micro-construction establishments through the Micro-Construction Establishment Survey (SKP23).

2.2 Sample of Micro-Construction Establishments

Based on the results of the 2023 Micro-Construction Establishment Survey that was conducted across 34 provinces in Indonesia, there were 23,608 establishment samples obtained, consisting of 15,735 building construction (66.65 percent), 2,803 civil construction (11.87 percent), and 5,070 establishments (21.48 percent) which conduct the specialized construction. The number of micro-construction establishments samples by province and activity can be seen in Table 2 and Figure 1.

Gambar 1 Persentase Sampel Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan, 2022
 Figure 1 Percentage of Micro-Construction Establishment Samples by Activity, 2022

2.3 Kepemilikan/Pengusaha

Pada umumnya, pengusaha konstruksi perorangan selain sebagai pimpinan usaha juga merangkap sebagai pekerja yang terjun langsung mengerjakan pekerjaan konstruksi. Pengusaha konstruksi perorangan didominasi oleh laki-laki (99,31 persen) dan hanya 0,69 persen saja pengusaha perempuan.

2.3.1 Umur Pengusaha

Umur pengusaha konstruksi perorangan dikelompokkan menjadi lima. Dari hasil pendataan diperoleh persentase pengusaha konstruksi perorangan pada kelompok umur kurang dari 30 tahun sebesar 1,38 persen, kelompok umur 30-39 tahun sebesar 15,04 persen, kelompok umur 40-49 tahun sebesar 40,72 persen, kelompok umur 50-59 tahun sebesar 31,89 persen, dan kelompok umur yang lebih dari 60 tahun sebesar 10,97 persen. Secara umum, umur pengusaha konstruksi perorangan didominasi oleh pengusaha dengan kelompok umur 40-49 tahun. Selanjutnya, persentase pengusaha konstruksi perorangan menurut provinsi dan kelompok umur dapat dilihat pada Tabel 6 dan Gambar 2.

2.3 Ownership/Entrepreneurs

Generally, micro-construction entrepreneurs, apart from business leaders, also undertake double position as workers who work directly on construction work. The dominant Micro-construction entrepreneurs were men with 99.31 percent, and only 0.69 percent were women entrepreneurs.

2.3.1 Entrepreneur Age

There are five categories to group the age of the micro-construction entrepreneur. The results of the data collection found that percentage of micro construction entrepreneur by the age group less than 30 years was 1.38 percent, the age group 30-39 years was 15.04 percent, the age group 40-49 years was 40.72 percent, the age group 50-59 years 31.89 percent, and the age group over 60 years of 10.97 percent. In general, the dominant group age of micro-construction entrepreneurs was entrepreneurs in the age group of 40-49 years. Furthermore, Table 6 and Figure 2 provide the percentage of micro-construction entrepreneurs by province and age group.

Gambar 2 Persentase Pengusaha Konstruksi Perorangan Menurut Kelompok Umur, 2022
 Figure 2 Percentage of Micro-Construction Entrepreneur by Age Group, 2022

2.3.2 Pendidikan Pengusaha

Pendidikan tertinggi pengusaha dikelompokkan menjadi Tidak Tamat SD, SD dan Sederajat, SMP dan Sederajat, SMA dan Sederajat, dan Perguruan Tinggi (DI/II/III/IV/S1/S2/S3). Hasil Survei Usaha Konstruksi Perorangan 2023 menunjukkan bahwa persentase pengusaha konstruksi perorangan yang tidak tamat SD sebesar 12,69 persen, tamat SD sederajat sebesar 25,70 persen, tamat SMP sederajat sebanyak 26,31 persen, tamat SMA sederajat sebanyak 33,17 persen, dan hanya sebanyak 2,13 persen untuk tamatan Perguruan Tinggi. Bila dilihat dari data tersebut, ternyata pengusaha konstruksi perorangan didominasi oleh pengusaha berpendidikan Sekolah Menengah (SMP dan SMA), kemudian disusul oleh yang berpendidikan Sekolah Dasar (tidak tamat SD dan SD sederajat). Tabel 7 dan Gambar 3 menyajikan persentase pengusaha konstruksi perorangan menurut provinsi dan pendidikan tertinggi yang ditamatkan.

2.3.2 Entrepreneur Education

There are a few groups of Entrepreneurs' education attainment: Uncompleted Elementary School, Elementary School and equivalent, Junior High School and equivalent, Senior High School and equal, and College (DI/II/III/DIV/S1/S2/S3). The results of the 2023 Micro-Construction Establishment Survey showed that the percentage of micro-construction entrepreneurs who did not complete elementary school was 12.69 percent, 25.70 percent completed elementary school or equivalent, 26.31 percent completed junior high school or equivalent, 33.17 percent completed senior high school or equivalent, and only 2.13 percent graduate from college graduates. Based on these data, micro-construction entrepreneurs were dominated by entrepreneurs with secondary school education (junior high school and senior high school), followed by those with elementary school education (did not finish elementary school and elementary school equivalent). Table 7 and Figure 3 present the percentage of micro-construction entrepreneurs by province and education attainment.

Gambar 3 Percentage of Micro-Construction Entrepreneur by the Education Attainment, 2022

2.4 Sumber Daya Manusia

Pada usaha konstruksi perorangan, SDM yang digunakan mencakup pekerja tetap/kontrak dan pekerja harian. Pekerja tetap/kontrak terdiri dari pemilik dan pekerja yang digaji setiap bulan, sedangkan pekerja harian adalah pekerja yang bekerja dan dibayar harian hanya selama ada pekerjaan konstruksi. Pada tahun 2022, pekerja konstruksi perorangan ini rata-rata bekerja selama 5 bulan (Tabel 19). Sedangkan rata-rata hari kerja per bulan selama 21 hari (Tabel 20). Data mengenai SDM usaha konstruksi perorangan diuraikan pada penjelasan dibawah ini:

2.4.1. Pekerja Tetap/Kontrak

Persentase banyaknya usaha konstruksi perorangan dikelompokkan berdasarkan jumlah pekerja tetap/kontrak di dalam usaha konstruksi tersebut. Usaha konstruksi perorangan yang mempunyai pekerja tetap/kontrak 1 orang sebesar 79,64 persen, usaha konstruksi perorangan dengan pekerja tetap/kontrak sebanyak 2 sampai 3 orang sebesar 14,05

2.4 Human Resources

Generally, the human resources used by micro-construction establishments include permanent/contract workers and daily workers. Permanent/contract workers consist of owners and workers paid monthly, while daily workers work and are paid per day while there is construction work. In 2022, these micro-construction workers work an average of 5 months (Table 19). In comparison, the average working days monthly is 21 (Table 20). The description of data regarding the HR of micro-construction establishment is in the explanation below:

2.4.1. Permanent/Contract Workers

The percentage of the number of micro-construction establishments grouped into the number of permanent/contract workers in the construction establishment. Construction establishments that have one permanent/contract worker by 79.64 percent, micro-construction establishments with 2 to 3 permanent/contract workers by 14.05 percent, micro-construction

persen, usaha konstruksi perorangan dengan pekerja tetap/kontrak sebanyak 4 sampai 5 orang sebesar 4,44 persen, dan usaha konstruksi perorangan dengan pekerja tetap/kontrak lebih besar dari 5 orang sebesar 1,87 persen. Hasil tersebut menunjukkan bahwa usaha konstruksi perorangan umumnya mempunyai satu orang pekerja tetap/kontrak saja yang biasanya juga berperan sebagai pemilik usaha. Data mengenai persentase usaha konstruksi perorangan menurut kabupaten/kota dan rata-rata banyaknya pekerja tetap/kontrak disajikan di Tabel 15 dan Gambar 4.

establishments with 4 to 5 permanent/contract workers by 4.44 percent, and the number of construction establishments with permanent/contract workers greater than five people at 1.87 percent. These results indicate that micro-construction establishments generally only have one permanent/contract worker who usually also acts as the establishment's owner. Table 15 and Figure 4 present the data on the percentage of micro-construction establishments by province and the average of permanent/contract worker.

Gambar 4
Figure 4
Persentase Usaha Konstruksi Perorangan Menurut Rata-Rata Pekerja Tetap/Kontrak, 2022
Percentage of Micro-Construction Entrepreneur by The Average Number of Permanent/Contract Worker, 2022

2.4.2 Pekerja Tidak Tetap/Harian dan Hari Orang Pekerja Harian

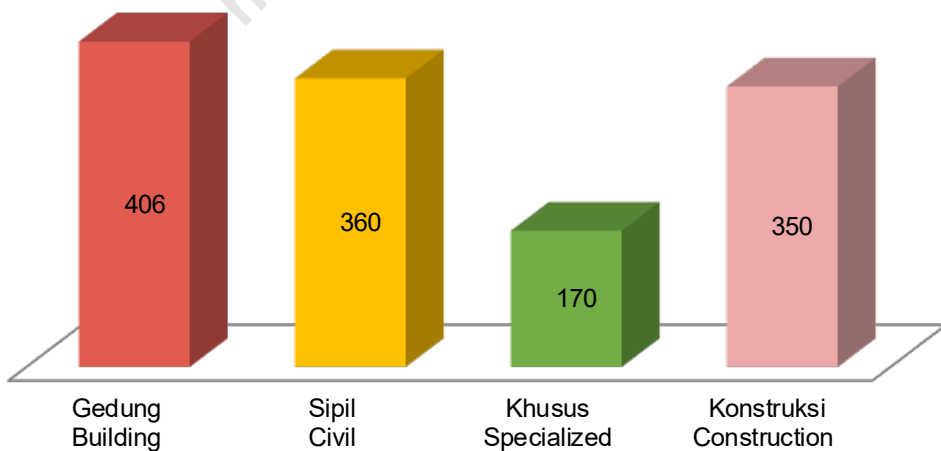

Gambaran banyaknya pekerja harian per bulan yang diserap oleh usaha konstruksi perorangan disajikan dalam rata-rata pekerja harian, yaitu sebanyak 3 (tiga) orang pekerja harian per bulan. Banyaknya pekerja harian per bulan menurut bidang pekerjaan dan menurut provinsi disajikan lebih rinci pada Tabel 17.

2.4.2 Daily Workers and Mandays of Daily Workers

A representation of the number of daily workers hired by micro-construction establishments is presented in the average daily worker, with three daily workers per month. Table 17 shows the number of daily workers per month by main activity and province.

Hari-orang pekerja harian adalah gambaran untuk mengetahui besarnya kontribusi produktivitas pekerja harian yang bekerja pada usaha konstruksi perorangan. Dalam hal ini, hari orang pekerja harian adalah jumlah banyaknya hari dan orang yang bekerja dalam satu kegiatan konstruksi selama setahun. Data mengenai rata-rata hari orang pekerja harian pada usaha konstruksi perorangan dirinci menurut bidang pekerjaan. Hasil pendataan Survei Usaha Konstruksi Perorangan 2023 diperoleh rata-rata hari orang pekerja harian usaha konstruksi yang tertinggi adalah usaha konstruksi gedung sebanyak 406 hari-orang, diikuti usaha konstruksi sipil sebanyak 360 hari-orang, dan sebanyak 170 hari-orang pekerja harian pada usaha konstruksi khusus. Secara umum, rata-rata hari orang pekerja harian usaha konstruksi perorangan sebanyak 350 hari-orang. Data mengenai rata-rata hari orang pekerja harian usaha konstruksi perorangan menurut provinsi dan bidang pekerjaan dirinci pada Tabel 18 dan Gambar 5.

Mandays for daily workers is an illustration to capture the productive contribution of daily workers in micro-construction establishments. In this case, mandays for daily workers are the number of days and people working in construction work during a year. Data regarding the average mandays for daily workers in micro-construction establishments are presented by activity. The results of the 2023 Micro-Construction Establishment Survey data collection obtained that the highest average mandays for daily worker in the construction business were building construction with 406 mandays, followed by civil construction with 360 mandays, and 170 mandays in specialized construction. Generally, the average mandays for daily workers in a micro-construction establishment is 350 mandays. Table 18 and Figure 5 depict the average mandays for daily workers in a micro-construction establishment by province and the activity.

Gambar 5 Rata-rata Hari Orang Pekerja Harian Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan, 2022
 Figure 5 Average Mandays for Daily Workers of Micro-Construction Establishment by Main Activity, 2022

2.4.3 Jaminan Sosial Pekerja

Kepemilikan jaminan sosial yang dicakup pada usaha konstruksi perorangan yaitu kepemilikan jaminan perlindungan kesehatan dan kepemilikan jaminan perlindungan ketenagakerjaan. Kesehatan dan Keselamatan Kerja merupakan salah satu hal yang perlu diperhatikan dalam dunia usaha untuk menciptakan lingkungan kerja yang sehat dan aman guna meningkatkan motivasi dan produktivitas kerja.

Gambar 6 Kepemilikan Jaminan Perlindungan Sosial Usaha Konstruksi Perorangan, 2022
Figure 6 Social Security Protection Ownership of Micro-Construction Establishment, 2022

Dari hasil pendataan, mayoritas usaha konstruksi perorangan tidak memiliki jaminan sosial baik jaminan kesehatan maupun ketenagakerjaan. Usaha konstruksi perorangan yang tidak memiliki jaminan perlindungan kesehatan sebesar 73,44 persen, usaha konstruksi perorangan yang memiliki jaminan perlindungan kesehatan atas sebagian pekerja sebesar 13,37 persen, dan usaha konstruksi perorangan yang memiliki jaminan perlindungan kesehatan atas

2.4.3 Worker's Social Security

The social security that is covered on micro-construction establishments is health protection and employment protection security ownership. Health and safety at work are critical components that must be concerned by employers for creating a healthy and safe work environment to increase work motivation and productivity to the construction workers.

As a result of the survey, the majority of micro-construction establishments did not have social security, both health protection and employment protection. In detail, approximately 73.44 percent of micro-construction establishments did not own health protection, 13.37 percent of micro-construction establishments where they let some of their workers to have health protection, and only around 13.19 of micro-construction establishments where the establishment required

seluruh pekerja sebesar 13,19 persen. Sedangkan dari sisi kepemilikan jaminan perlindungan ketenagakerjaan, usaha konstruksi perorangan yang tidak memiliki jaminan perlindungan ketenagakerjaan sebesar 96,16 persen, usaha konstruksi perorangan yang memiliki jaminan perlindungan ketenagakerjaan atas sebagian pekerja sebesar 2,40 persen, dan usaha konstruksi perorangan yang memiliki jaminan perlindungan ketenagakerjaan atas seluruh pekerja sebesar 1,44 persen. Data mengenai jaminan sosial pekerja usaha konstruksi perorangan menurut provinsi dirinci pada Tabel 8 - 9 dan Gambar 6.

all of their workers to have health protection. For the employment protection side, there was roughly 96.16 percent of micro-construction establishments where the workers did not have employment protection, 2.40 percent of micro-construction establishments where some of the workers had employment protection, and about 1.44 percent of micro-construction establishments that mandated all of their workers to have employment protection security. Table 8-9 and Figure 6 detailedly provide the employment's social security data for micro-construction establishment by province.

2.4.4 Kepemilikan Sertifikat Kompetensi Pekerja

2.4.4 The Worker's Competency Certificate Ownership

Gambar 7 7 Kepemilikan Sertifikat Kompetensi Kerja Usaha Konstruksi Perorangan, 2022
Figure 7 7 Competency Certificate Ownership of Micro-Construction Establishment, 2022

Sertifikasi kompetensi kerja konstruksi menandakan bahwa pelaku usaha konstruksi telah terbukti memiliki kemampuan dan kompetensi di bidang jasa konstruksi bagi para pekerjanya. Di Indonesia, sebagian besar pelaku

The worker's competency certificate indicates that the micro-construction establishment has proof of skill and competency related to construction services for its construction workers. In Indonesia, most micro-construction establishments, precisely

usaha konstruksi perorangan tidak memiliki sertifikat kompetensi konstruksi sebesar 96,86 persen atas seluruh pekerjanya, usaha konstruksi perorangan yang memiliki sertifikat kompetensi konstruksi sebagian pekerjanya sebesar 2,18 persen, dan sisanya hanya sebesar 0,96 persen usaha konstruksi perorangan memiliki sertifikat kompetensi konstruksi atas semua pekerjanya. Data mengenai kepemilikan sertifikat kompetensi pekerja usaha konstruksi perorangan menurut provinsi dirinci pada Tabel 10 dan Gambar 7.

2.4.5 Bimbingan/Pelatihan/Penyuluhan

Peningkatan kompetensi sangat dibutuhkan bagi para pelaku usaha untuk peningkatan skala dan kemampuan usaha agar dapat bertahan di tengah persaingan bahkan meningkatkan peluang agar bisa naik level menjadi usaha skala menengah ataupun besar. Peningkatan kompetensi tersebut dapat diperoleh dari bimbingan/pelatihan/penyuluhan. Akan tetapi, hasil SKP23 menunjukkan hanya 4,65 persen usaha konstruksi yang pekerjanya pernah mengikuti bimbingan/pelatihan/penyuluhan. Data mengenai partisipasi dalam bimbingan/pelatihan/penyuluhan usaha konstruksi perorangan menurut provinsi dirinci pada Tabel 11.

2.5 Balas Jasa Pekerja Tetap/Kontrak, Upah Pekerja Harian, dan Balas Jasa dan Upah Pekerja

Pengeluaran sebagai balas jasa dan upah pekerja mencakup gaji yang dibayarkan kepada pekerja tetap/kontrak dan upah yang dibayarkan kepada pekerja harian. Pembayaran gaji untuk pekerja tetap/kontrak dikeluarkan setiap bulan, sedangkan upah pekerja harian dihitung berdasarkan banyaknya hari kerja pada suatu pekerjaan konstruksi.

96.86 percent, all of their workers did not have at least a competency certificate for their occupation. In comparison, 2.18 percent of the micro-construction establishments let some of their workers owned the competency certificate approximately. Another explanation that around 0.96 percent of the micro-construction establishments required their employees to attain at least a competency certificate for their occupation. Table 10 and Figure 7 detail the worker's competency certificate of micro-construction establishments by province.

2.4.5 Guidance/Training/Counseling

The competency improvement necessarily helps the micro-construction establishment executor to maintain scale and capability of the establishment to survive in construction competitiveness, even more, increase the opportunity to upgrade business level to medium or large establishment. The competency improvement can be conducted through guidance/training/counseling to gain competency improvement. Alas, the SKP23 result showcased that only 4.65 percent of micro-construction establishments the workers had experience in guidance/training/counseling. Table 11 showcases the detailed data regarding the guidance/training/counseling that the workers at the micro-construction establishment experienced by province.

2.5 Compensation of Permanent Worker, Wages of Daily Worker, and Compensation and Wages of Worker

Compensation and wages include salaries paid to permanent/contract and daily workers. Salary payments for permanent/contract workers are paid monthly, while wages for daily workers are paid based on the number of working days in a micro-construction job.

2.5.1 Balas Jasa Pekerja Tetap/Kontrak

Secara umum, median balas jasa per pekerja tetap/kontrak per bulan usaha konstruksi perorangan adalah sebesar Rp3.000.000. Menurut bidang pekerjaan, median balas jasa per pekerja tetap/kontrak per bulan untuk konstruksi gedung sebesar Rp3.120.000, konstruksi sipil sebesar Rp2.500.000, dan konstruksi khusus sebesar Rp2.250.000. Adapun median balas jasa per pekerja tetap/kontrak usaha konstruksi perorangan dirinci pada Tabel 22 dan Gambar 8.

2.5.1 Compensation for Permanent Workers

Generally, the median monthly compensation per permanent/contract workers of micro-construction establishment was IDR 3,000,000. According to the critical business activities, the median compensation per permanent worker/contract per month for building construction was IDR 3,120,000, civil construction was IDR 2,500,000, and specialized construction was IDR 2,250,000. Table 22 and Figure 8 wholly present the median compensation for permanent/contract workers of micro-construction establishments.

Gambar 8 Median Balas Jasa per Pekerja Tetap/Kontrak per Bulan Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan (ribu rupiah), 2022
Figure 8 Median Compensation per Permanent/Contract Worker Monthly of Micro-Construction Establishment by Activity (thousand rupiahs), 2022

2.5.2 Upah Pekerja Harian

Secara umum, rata-rata upah pekerja harian adalah sebesar Rp102.000 per hari. Menurut bidang pekerjaan, rata-rata upah pekerja harian untuk konstruksi gedung sebesar Rp101.000 per hari, konstruksi sipil sebesar Rp118.000 per hari, dan konstruksi khusus sebesar Rp100.000 per hari. Rata-rata upah pekerja harian konstruksi menurut provinsi dan bidang pekerjaan dirinci pada Tabel 23.

2.5.2 Wages for Daily Workers

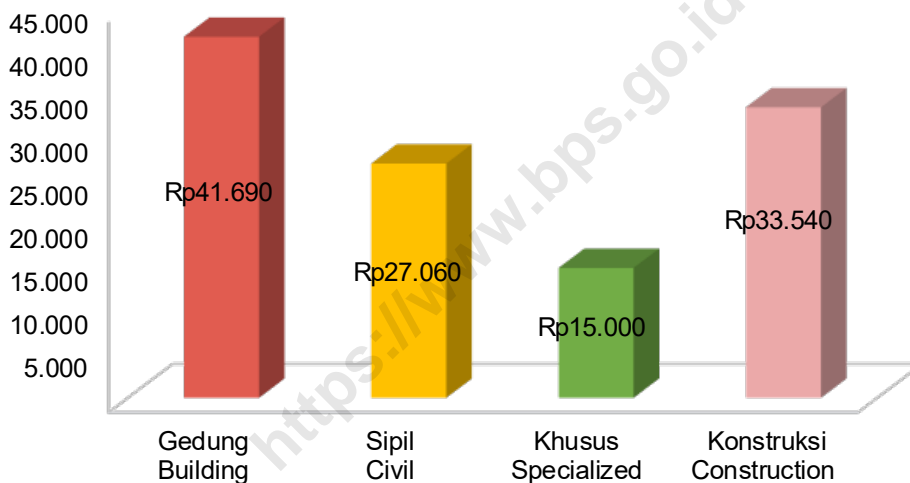

Generally, the average daily worker's wage was IDR 102,000 per day. By main activity, the average wage for daily workers for building construction was IDR 101,000 per day, for civil construction was IDR 118,000 per day, and for specialized construction was IDR 100,000 per day. Depicted average daily wage for micro-construction establishments' workers by province and main activity was provided in Table 23.

2.5.3 Balas Jasa dan Upah Pekerja

Secara umum, median total balas jasa dan upah pekerja konstruksi selama setahun adalah sebesar Rp33.540.000, Jika dirinci menurut bidang pekerjaan, median balas jasa dan upah pekerja untuk konstruksi gedung sebesar Rp41.690.000, konstruksi sipil sebesar Rp27.060.000, dan konstruksi khusus sebesar Rp15.000.000. Adapun median total balas jasa dan upah menurut provinsi dan bidang pekerjaan dapat dilihat pada Tabel 24 dan Gambar 9.

2.5.3 Compensation and Wages for Workers

Generally, the median compensation and wages for workers of micro-construction establishments was approximately IDR 33,540,000 annually. In detail by main activity, the median compensation and wages for building construction was IDR 41,690,000, civil construction was IDR 27,060,000, and specialized construction was IDR 15,000,000. The detailed total median compensation and wages by province and main activity are seen in Table 24 and Figure 9.

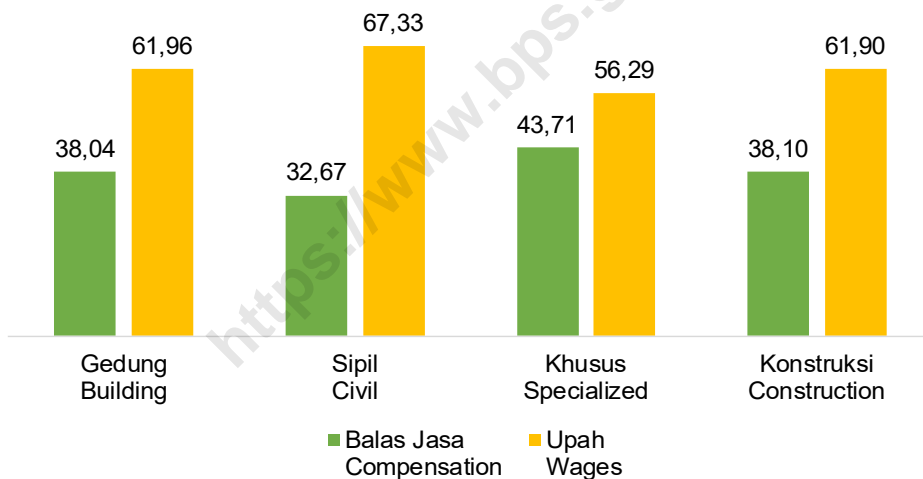

Gambar 9 Median Balas Jasa dan Upah Pekerja Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan (ribu rupiah), 2022
Figure 9 Median Compensation and Wages for of Micro-Construction Establishment by Activity (thousand rupiahs), 2022

Apabila dilihat dari struktur balas jasa pekerja tetap/kontrak dan rata-rata upah pekerja harian terhadap total balas jasa dan upah pekerja konstruksi pada masing-masing usaha konstruksi perorangan, maka balas jasa pekerja tetap/kontrak rata-rata berkontribusi sebesar 38,10 persen terhadap total balas jasa dan upah pekerja konstruksi, sedangkan upah pekerja konstruksi rata-rata berkontribusi sebesar 61,90 persen terhadap total balas jasa dan upah pekerja usaha

An insight from permanent/contract workers' compensation and daily workers' wages structure on each main micro-construction activity depicted that the permanent/contract workers' compensation contributed 38.10 percent to total compensation and wages. Daily workers' wages contributed around 61.90 percent to total compensation and wages for micro-construction establishment matters. Another detail by main activity showcased that building construction

konstruksi perorangan. Jika dirinci menurut bidang pekerjaan, pada konstruksi gedung, balas jasa berkontribusi sebesar 38,04 persen dan upah berkontribusi sebesar 61,96 persen. Pada konstruksi sipil, balas jasa berkontribusi sebesar 32,67 persen dan upah berkontribusi sebesar 67,33 persen, dan pada konstruksi khusus, balas jasa berkontribusi sebesar 43,71 persen dan upah berkontribusi sebesar 56,29 persen. Adapun rata-rata persentase komposisi balas jasa pekerja tetap/kontrak dan upah pekerja harian terhadap total balas jasa dan upah menurut bidang pekerjaan dan provinsi dapat dilihat pada Tabel 25, 25.1, 25.2, 25.3, dan Gambar 10.

shared up to 38.04 percent for total compensation and 61.96 percent for real wages in that field. In civil construction, compensation contributed 32.67 percent, and wages contributed 67.33 percent to total compensation and wages. In another main activity, the specialized construction compensation supplied 43.71 percent, and wages gave 56.29 to the total compensation and wages for micro-construction establishments' workers. Additionally, Tables 25, 25.1, 25.2, 25.3, and Figure 10 display the average percentages composition of permanent/contract workers' compensation and daily workers' wages to the total compensation and wages by province and main activity.

Gambar 10 Struktur Balas Jasa dan Upah Pekerja Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan, 2022
Figure 10 Compensation and Wages Structure for Workers of Micro-Construction Establishment by Activity, 2022

2.6 Produktivitas dan Persentase Penggunaan Bahan/Material & Upah Pekerja Harian

2.6 Productivity and Percentage Use of Substances/Materials & Daily Worker's Wages

Produktivitas usaha konstruksi perorangan ditunjukkan dengan besarnya nilai konstruksi yang diselesaikan. Semakin tinggi nilai

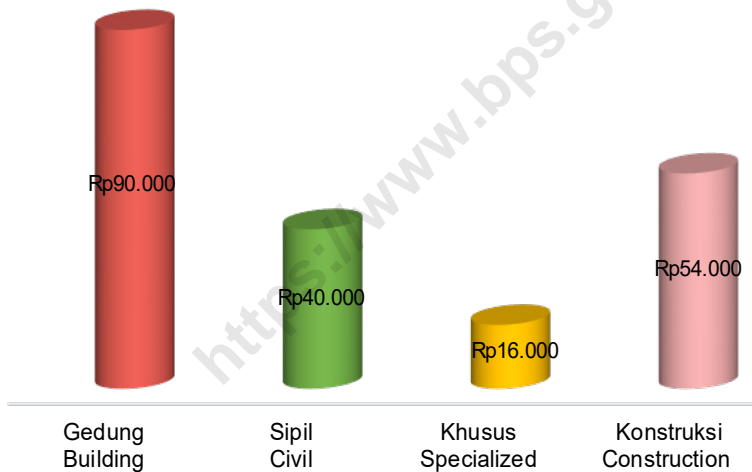

Micro-construction establishment productivity measures on the completed construction value. The higher the completed

konstruksi yang diselesaikan, semakin tinggi juga tingkat produktivitasnya. Kemudian persentase penggunaan bahan/material maupun upah pekerja harian terhadap nilai konstruksi yang diselesaikan menunjukkan bahwa semakin kecil nilainya akan semakin efisien pekerjaan konstruksi yang dikerjakan. Dibawah ini akan dijelaskan lebih rinci mengenai median nilai konstruksi yang diselesaikan menurut bidang pekerjaan dan persentase penggunaan bahan/material maupun upah pekerja harian terhadap nilai konstruksi yang diselesaikan menurut bidang pekerjaan.

construction value, the more productive rate of their activities. Then, the percentage use of substances/materials and daily worker's wages to the completed construction value indicates that the smaller the expenditure, the more efficient the micro-construction establishment conducts the construction activity. The explanation below will mainly describe the median completed construction value by main activity, the percentage use of substances/materials, and daily worker's wages to the completed construction value by main activity.

2.6.1 Nilai Konstruksi yang Diselesaikan

2.6.1 Completed Construction Value

Gambar 11 Median Nilai Konstruksi yang Diselesaikan Usaha Konstruksi Perorangan Menurut KBLI 2-digit (ribu rupiah), 2022
 Figure 11 Median Completed Construction Value of Micro-Construction Establishment by 2-digit ISIC (thousand rupiahs), 2022

Hasil Survei Konstruksi Perorangan 2023 menunjukkan bahwa secara umum, median nilai konstruksi yang diselesaikan adalah sebesar Rp54 juta. Jika dirinci menurut KBLI 2-digit, median nilai konstruksi yang diselesaikan untuk konstruksi gedung memiliki nilai sebesar Rp90 juta, median nilai konstruksi yang diselesaikan

The 2023 Micro-construction Survey Result depicted that generally, the median completed construction value was IDR 54 million. Detailed by 2-digit ISIC, the median completed construction value for building construction was IDR 90 million, the median completed construction value for civil construction was IDR 40 million, and the median

untuk konstruksi sipil sebesar Rp40 juta, dan median nilai konstruksi yang diselesaikan untuk konstruksi khusus sebesar Rp16 juta. Tabel 29 dan Gambar 11 menyajikan median nilai konstruksi yang diselesaikan usaha konstruksi perorangan menurut provinsi dan bidang pekerjaan.

2.6.2 Persentase Bahan/Material yang Digunakan

Persentase penggunaan bahan/material terhadap nilai konstruksi yang diselesaikan dikelompokkan menjadi < 20%, 20-39%, 40-59%, dan > 60%. Secara umum, banyaknya usaha konstruksi perorangan yang menggunakan bahan/material < 20% adalah sebesar 10,56 persen, 20-39% sebesar 14,04 persen, 40-59% sebesar 34,53 persen, dan ≥ 60% adalah sebesar 40,87 persen.

Jika dirinci menurut bidang pekerjaan, usaha konstruksi gedung menurut penggunaan bahan/material < 20% ada sebesar 10,32 persen, 20-39% sebesar 12,53 persen, 40-59% sebesar 33,64 persen, dan sebesar 43,51 persen untuk penggunaan bahan/material ≥ 60%. Selanjutnya, banyaknya usaha konstruksi sipil dengan penggunaan bahan/material < 20% ada sebesar 12,74 persen, 20-39% sebanyak 17,55 persen, 40-59% sebanyak 33,36 persen, dan sebanyak 36,65 persen untuk penggunaan bahan/material ≥ 60%. Demikian juga usaha konstruksi khusus menurut penggunaan bahan/material < 20% ada sebanyak 10,08 persen, 20-39% sebanyak 16,77 persen, 40-59% sebanyak 37,97 persen, dan sebanyak 35,19 persen untuk penggunaan bahan/material ≥ 60%. Dari data diatas diketahui bahwa persentase penggunaan bahan/material umumnya untuk usaha konstruksi perorangan membutuhkan bahan/material di atas 60 persen dari nilai konstruksi yang diselesaikan. Untuk lebih jelasnya dapat dilihat pada Tabel 3, 3.1,

completed construction for specialized construction was IDR 16 million. Table 29 and Figure 11 provide the median completed construction value of micro-construction establishment, detailed by province and main activity.

2.6.2 The Percentage Use of Substances/ Materials

There were determined classifications for the percentage use of substances/materials to the completed construction value in micro-construction matter, i.e., <20%, 20-39%, 40-59%, and ≥ 60%. Generally, the number of micro-construction establishments that used the substances/materials against the completed construction value around <20% was 10.56 percent, the 20-39% use was 14.04 percent, the 40-59% use was 34.53 percent, and the ≥ 60% use was 40.87 percent.

Detailed by main activity, the number of buildings micro-construction establishments that used substances/material around <20% was 10.32 percent, the 20-39% use was 12.53 percent, the 40-59% use was 33.64 percent, and the ≥ 60% use was 43.51 percent. For the civil construction detail, the number of micro-construction establishments that used substances/material around <20% was 12.74 percent, the 20-39% use was 17.55 percent, the 40-59% use was 33.36 percent, and the ≥ 60% use was 36.65 percent. As well as the specialized construction, the number of micro-construction establishments that used substances/materials around <20% was 10.08 percent, the 20-39% use was 16.77 percent, the 40-59% use was 37.97 percent, and the ≥ 60% use was 35.19 percent. The explanation above acknowledged that most micro-construction establishments generally spent substances/materials for construction activity more than 60% of completed construction value. Tables 3, 3.1, 3.2, 3.3, and Figure 12 detail more data regarding the number of micro-construction

3.2, 3.3 dan Gambar 12 terkait persentase usaha konstruksi perorangan menurut persentase penggunaan bahan/material terhadap nilai konstruksi yang diselesaikan dan provinsi.

establishments by percentage use of substances/materials against completed construction value and by province.

Gambar 12 *Figure* 12 **Percentage of Micro-Construction Establishment by Activity and The Percentage of Used Materials to the Completed Construction Value, 2022**

2.6.3 Persentase Upah Pekerja Harian

Sama halnya dengan bahan/material, persentase upah pekerja harian terhadap nilai konstruksi yang diselesaikan juga dikelompokkan menjadi $< 20\%$, $20-39\%$, $40-59\%$, dan $\ge 60\%$.

Secara umum, banyaknya usaha konstruksi perorangan yang menggunakan upah pekerja harian $< 20\%$ adalah sebesar 28,84 persen, $20-39\%$ sebesar 48,38 persen, $40-59\%$ sebesar 18,11 persen, dan $\ge 60\%$ sebesar 4,67 persen. Jika dirinci menurut bidang pekerjaan, usaha konstruksi gedung dengan upah pekerja harian $< 20\%$ adalah sebesar 29,74 persen, $20-39\%$ sebesar 48,17 persen, $40-59\%$ sebesar 17,81 persen, dan sebesar 4,27 persen untuk upah pekerja harian $\ge 60\%$. Adapun banyaknya usaha konstruksi sipil menurut upah pekerja

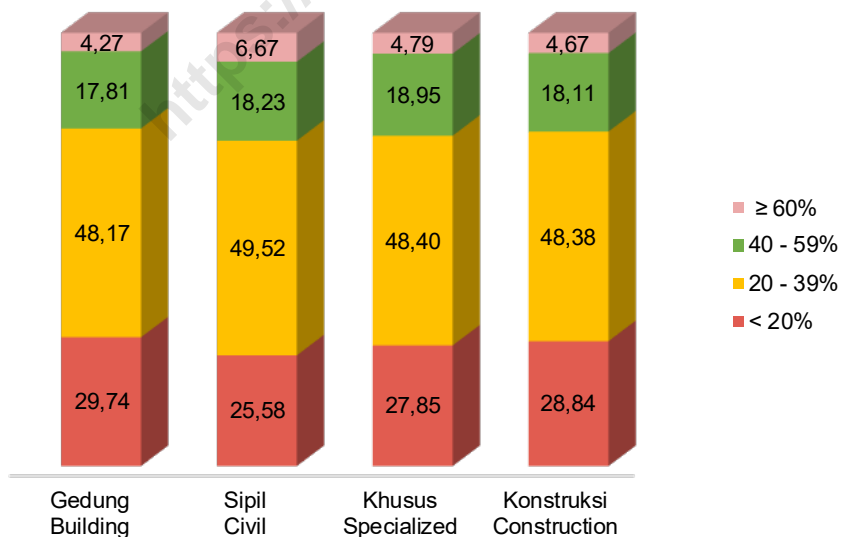

2.6.3 The Percentage Daily Worker's Wages

The classification for the percentage of daily workers' wages to the completed construction value is as same as the substances/materials class: $< 20\%$, $20-39\%$, $40-59\%$, and $\ge 60\%$.

Generally, the number of micro-construction establishments that used the worker's wage against the completed construction value around $< 20\%$ was 28.84 percent, the $20-39\%$ use was 48.38 percent, the $40-59\%$ use was 18.11 percent, and the $\ge 60\%$ use was 4.67 percent. Detailed by main activity, the number of buildings micro-construction establishments that used daily worker's wage against completed construction value around $< 20\%$ was 29.74 percent, the $20-39\%$ use was 48.17 percent, the $40-59\%$ use was 17.81 percent, and the $\ge 60\%$ use was 4.27 percent.

harian < 20% adalah sebesar 25,58 persen, 20-39% sebesar 49,52 persen, 40-59% sebesar 18,23 persen, dan sebesar 6,67 persen untuk upah pekerja harian \geq 60%. Sedangkan banyaknya usaha konstruksi khusus menurut upah pekerja harian < 20% adalah sebesar 27,85 persen, 20-39% sebesar 48,40 persen, 40-59% sebesar 18,95 persen, dan sebesar 4,79 persen untuk upah pekerja harian \geq 60%. Hasil tersebut menunjukkan bahwa pada umumnya, usaha konstruksi perorangan menggunakan sekitar 20-39% dari nilai konstruksi yang diselesaikan untuk biaya upah pekerja harian. Tabel 4, 4.1, 4.2, 4.3 dan Gambar 13 menyajikan persentase usaha konstruksi perorangan menurut provinsi dan persentase upah pekerja harian terhadap nilai konstruksi yang diselesaikan.

For the civil construction detail, the number of micro-construction establishments that used daily worker's wages against completed construction value around <20% was 25.58 percent, the 20-39% use was 49.52 percent, the 40-59% use was 18.23 percent, and the \geq 60% use was 6.67 percent. As well as specialized construction, the number of micro-construction establishments that used daily worker's wage against completed construction value around <20% was 27.85 percent, the 20-39% use was 48.40 percent, the 40-59% use was 18.95 percent, and the \geq 60% use was 4.79 percent. The result above indicated that most micro-construction establishments generally spent daily worker's wages for construction activity around 20-39% of completed construction value. Tables 4, 4.1, 4.2, 4.3, and Figure 13 detail more data regarding the number of micro-construction establishments by percentage use of daily worker's wages against completed construction value and by province.

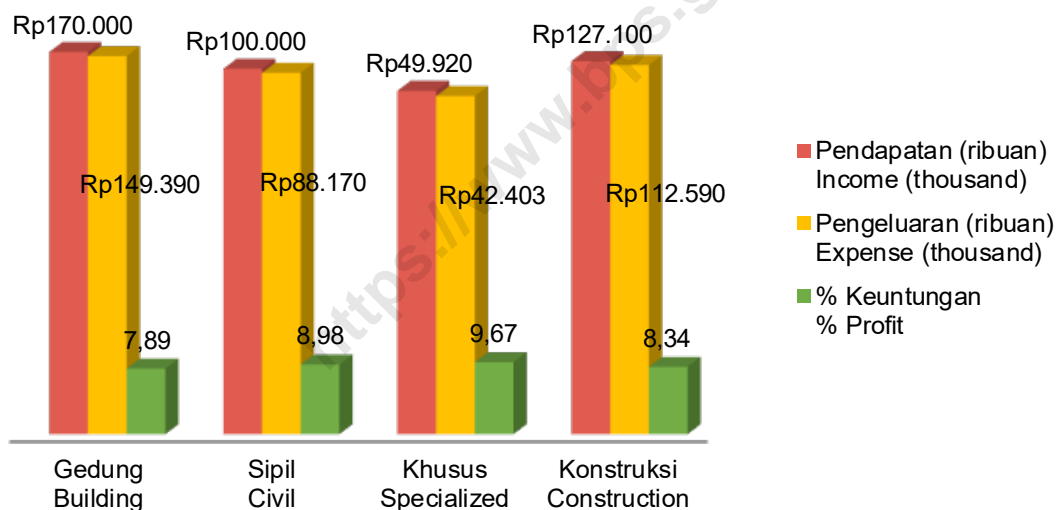

Gambar 13 Persentase Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan dan Persentase Upah Pekerja Harian terhadap Nilai Konstruksi yang Diselesaikan 2022
 Figure 13 Percentage of Micro-Construction Establishment by Province and The Percentage of Daily Workers' Wages to the Completed Construction Value, 2022

2.7 Pendapatan, Pengeluaran, dan Keuntungan

Pendapatan merupakan hasil dari kegiatan usaha konstruksi meliputi nilai konstruksi yang diselesaikan dan pendapatan dari kegiatan lainnya. Sedangkan pengeluaran usaha konstruksi perorangan merupakan komponen biaya kegiatan yang ikut dalam proses kegiatan usaha konstruksi, ditambah balas jasa dan upah pekerja. Dalam hal ini komponen pengeluaran usaha konstruksi terdiri dari pemakaian bahan bakar dan pelumas, listrik, bahan/material yang digunakan, dan biaya-biaya serta jasa lainnya. Kemudian keuntungan dihitung dari selisih antara pendapatan dengan pengeluaran.

2.7 Income, Expenses, and Profit

Income encompasses the result of all construction activities including completed construction value and additional revenue from miscellaneous activities. Secondly, the micro-construction establishments' expenses scopes all spent costs that were included in construction activities, plus compensation and wages for micro-construction worker. In this report, all construction costs components append the fuel and lubricant use, electricity use, substances/materials use, and other services costs. Hence, the profit is calculation of a marginal deduction from income and expenses.

Gambar 14 Median Pendapatan, Pegeluaran dan Persentase Keuntungan Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan, 2022
Median Income, Expenses, and Profit Percentage of Micro-Construction Establishment by Activity, 2022

Berdasarkan hasil pendataan Survei Usaha Konstruksi Perorangan 2023, untuk usaha konstruksi gedung, median pendapatan sebesar Rp170 juta, median pengeluaran sebesar Rp149,39 juta, dan median persentase keuntungan sebesar 7,89 persen. Kemudian,

According to the 2023 micro-construction establishment survey, for building construction, the median income was IDR 170 million, the median expense was IDR 149.39 million, and the median profit percentage was 7.89 percent. Also, for civil construction activities, the median

untuk usaha konstruksi sipil, median pendapatan sebesar Rp100 juta, median pengeluaran sebesar Rp88,17 juta, dan median persentase keuntungan sebesar 8,98 persen. Adapun untuk usaha konstruksi khusus, median pendapatan sebesar Rp49,92 juta, median pengeluaran sebesar Rp42,403 juta, dan median persentase keuntungan sebesar 9,67 persen. Secara umum, usaha konstruksi perorangan memiliki median pendapatan sebesar Rp127,10 juta, median pengeluaran sebesar Rp112,59 juta, dan median persentase keuntungan sebesar 8,34 persen. Untuk lebih jelasnya, median pendapatan, median biaya pengeluaran, dan persentase keuntungan menurut provinsi dapat dilihat pada Tabel 33, 33.1, 33.2, 33.3, dan Gambar 14.

2.8 Pembiayaan Proyek dan Permodalan Usaha

Sumber modal awal pembiayaan proyek usaha konstruksi perorangan dalam menangani suatu pekerjaan umumnya langsung dari pemilik proyek (*bouwheer*), karena rata-rata permodalan usaha konstruksi perorangan masih belum terlampaui kuat. Dari hasil pendataan Survei Usaha Konstruksi Perorangan 2023 diperoleh sekitar 55,27 persen sumber modal awal pembiayaan proyek berasal dari pemilik proyek (*bouwheer*), dan sisanya merupakan kombinasi antara sumber milik sendiri, sumber pinjaman bank/koperasi/lembaga pembiayaan lainnya, dan pemilik proyek (*bouwheer*). Adapun data mengenai sumber modal awal pembiayaan proyek dapat dilihat pada Tabel 12.

2.9 Harta Lancar dan Harta Tetap

Modal usaha konstruksi perorangan terdiri dari dua komposisi, yaitu harta lancar dan harta tetap. Median modal usaha konstruksi perorangan sampai dengan Desember 2022 adalah sebesar Rp27,50 juta, dengan median harta lancar sebesar Rp1,00 juta dan harta tetap

income was IDR 100 million, the median expenses was IDR 88.17 million, and the median profit percentage was 8.98 percent. Additionally, for specialized construction, the median income was IDR 49.92 million, the median expenses was IDR 42.403 million, and the median profit percentage was 9.67 percent. Generally, the micro-construction establishments produced the median income with IDR 127.10 million, the median expenses of 112.59 million, and the result of the median profit percentage was 8.34 percent. For more detail, Tables 33, 33.1, 33.2, 33.3 and Figure 14 explain the median income, the median expenses, the median profit percentage of micro-construction establishments in Indonesia by province.

2.8 Project Funding and Business Capital

The initial project fund in handling a micro-construction activity, in general, sources from the project's client/owner (bouwheer), owing to the average fund capital source of micro-construction establishment, is insufficiently robust. The 2023 Micro-construction Establishment Survey showed that approximately 55.27 percent of micro-construction establishments' projects were sourced from clients (bouwheer), and the rest of them came from the combination of establishments' owned-capital, bank/financial institution loans, and client (bouwheer). For more information about the initial project fund resource, see Table 12.

2.9 Fixed and Current Capital

Business capital consists of two components: fixed capital and current capital. The median business capital of micro-construction establishments until December 2022 recorded as much as IDR 27.50 million: specifically, the median current capital was IDR 1.00 million, and the median

sebesar Rp22,00 juta. Jika dirinci menurut bidang pekerjaan, median modal usaha konstruksi gedung adalah sebesar Rp25,50 juta, terdiri dari Rp1,00 juta harta lancar dan Rp20,00 juta harta tetap. Sedangkan untuk konstruksi sipil, median modal sebesar Rp38,80 juta, terdiri dari Rp1,00 juta harta lancar dan Rp32,35 juta harta tetap. Selanjutnya untuk konstruksi khusus, median modal sebesar Rp30,00 juta, terdiri dari Rp1,448 juta harta lancar dan Rp24,00 juta harta tetap. Dengan demikian umumnya modal usaha konstruksi perorangan dalam bentuk harta tetap sebesar 92,93 persen dan harta lancar sebesar 7,07 persen. Tabel 34, 35, 35.1 s.d. 35.3, dan Gambar 15 menyajikan median modal usaha konstruksi perorangan menurut provinsi dan bidang pekerjaan.

fixed capital was IDR 22.00 million. Detailed by main activity, the median capital of micro building construction establishments was IDR 25.50 million, with IDR 1.00 million current capital and IDR 20.00 of fixed capital. Besides, for civil construction activity, the median capital was IDR 38.80 million, formed by IDR 1.00 million of current capital and IDR 32.35 million of fixed capital. Next, the median capital for the specialized construction activity was IDR 30.00 million, determined by IDR 1.448 million of current capital and IDR 24.00 million of fixed capital. In short, the micro-construction establishments' capital was predominantly created by 92.93 percent of fixed capital and 7.07 percent of current capital. Tables 34, 35, 35.1 to 35.3 and Figure 15 serve the median capital of micro-construction establishments by province and main activity.

Gambar 15 Median Modal Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan (ribu rupiah), 2022
 Figure 15 Median Business Capital of Micro-Construction Establishments by Activity (thousand rupiahs), 2022

2.10 Prospek dan Kendala Usaha

Kondisi usaha merupakan persepsi pengusaha dalam melihat kondisi bisnisnya pada tahun sekarang dibandingkan dengan keadaan pada tahun yang lalu. Sementara prospek usaha merupakan persepsi pengusaha dalam melihat kondisi bisnisnya pada tahun yang akan datang dibandingkan dengan keadaan pada tahun sekarang. Variabel untuk melihat kondisi dan prospek usaha meliputi pendapatan usaha, pesanan bahan/material dan komponen lainnya, harga bahan/material dan komponen lainnya, jumlah pekerja tetap/kontrak, gaji pekerja tetap/kontrak, hari orang, dan upah pekerja harian. Sedangkan kendala merupakan permasalahan usaha konstruksi perorangan dalam menjalankan bisnisnya yang berupa akses ke kredit, suku bunga pinjaman/kredit, kenaikan harga bahan/material dan komponen lainnya, penurunan permintaan jasa konstruksi secara umum, persaingan usaha, kesulitan pasokan bahan/material dan komponen lainnya, sumber daya manusia yang terampil, birokrasi administrasi, politik dan keamanan, dan kesehatan dan keselamatan kerja (K3). Adapun kondisi, prospek, dan kendala usaha konstruksi perorangan selanjutnya disajikan dalam bentuk angka indeks.

2.10.1 Indeks Kondisi dan Prospek Usaha

Secara umum indeks kondisi usaha konstruksi perorangan sebesar 59,65 dan prospek usaha konstruksi perorangan sebesar 61,36. Dari data tersebut terlihat bahwa nilai indeks kondisi bisnis dan nilai indeks prospek bisnis cenderung lebih besar dari 50,00. Artinya, secara umum untuk usaha konstruksi perorangan, pengusaha konstruksi perorangan melihat kondisi usahanya cenderung optimis pada tahun 2022. Selain itu, pengusaha melihat prospek ke depan dari usaha konstruksi perorangan lebih baik dan optimis dari kondisi tahun 2022. Untuk lebih jelasnya,

2.10 Business Prospect and Problem

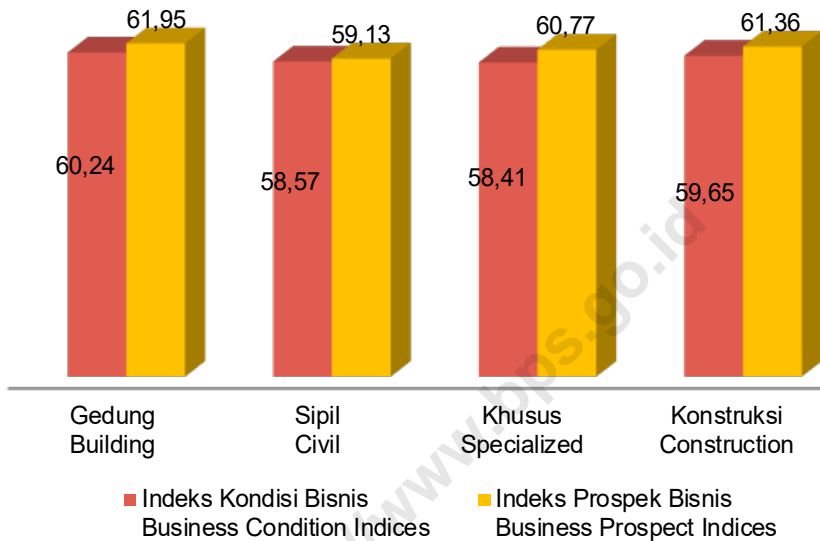

Business condition resonates with the entrepreneur's perspective in seeing their business in an ongoing year compared to the previous year. Afterward, the business prospect is an entrepreneur's point-of-view to predict their business progress in the following year compared to the current year. Variables to determine business condition and prospect are establishments' income, substances/materials and other components orders, the substances/materials price, the amount of permanent/contract workers, the permanent/contract workers' compensation, man-days, and daily workers' wages. Additionally, the business problem reflects all constraints that entrepreneurs conduct in running their business that can be generated from credit access, loan/credit interest rate, substances/materials and other components inflation, general construction demand downturn, competitiveness, substances/materials supplies difficulty, lack of proficient human resources, administrative bureaucracy, politics and security, and occupational health and safety. Hence, the business condition, prospects, and problems are represented in the index value.

2.10.1 Business Condition and Prospect Indices

Generally, the business condition indices were 59.65, and the business prospect indices of micro-construction establishments were 61.36. These numbers illustrated that the business condition and prospect indices were above 50.00. Meaningfully, the entrepreneurs tended to see their business condition optimistically for general micro-construction establishments in 2022. Another interpretation showed that the entrepreneurs saw their future business activity optimistically – the following year would probably be better than the condition in 2022. For more detailed

indeks kondisi bisnis dan indeks prospek bisnis dapat dilihat pada Tabel 36, 37 dan Gambar 16 tentang indeks kondisi dan indeks prospek usaha konstruksi perorangan menurut provinsi.

indexes, Tables 36, 37, and Figure 16 showcase the business condition and prospect indices of micro-construction establishments by their components and province.

Gambar 16 *Indeks Kondisi dan Prospek Usaha Konstruksi Perorangan Menurut Bidang Pekerjaan, 2022*
 Figure 16 *Business Condition and Prospect Indices of Micro-Construction Establishment by Main Activity, 2022*

2.10.2 Indeks Masalah Bisnis

Indikasi atau petunjuk permasalahan yang dihadapi usaha konstruksi perorangan diketahui melalui nilai indeks masalah bisnis usaha konstruksi yang secara umum mempunyai sedikit masalah dalam menjalankan bisnisnya dengan nilai indeks sebesar 15,85. Pada Tabel 38, 38.1 s.d 38.3 dan Gambar 17, disajikan indeks masalah bisnis usaha konstruksi perorangan menurut provinsi dan bidang pekerjaan.

2.10.2 Business Problem Indices

The indication or direction of the struggles that establishments face is investigated through business problem indices where, according to the survey result, the general micro-construction establishments had a small number of problems in running their business, of which the index was 15.85. Tables 38, 38.1 to 38.3, and Figure 17 provide the business problem indices of micro-construction establishments by their components, main activity, and province.

 Figure 17 *Business Problem Indices of Micro-Construction Establishment by Main Activity, 2022*

Tabel 1 Ringkasan Statistik Konstruksi Perorangan, 2022
Table Statistics Summary of Micro-Construction Establishments, 2022

| | Ringkasan Summary | Satuan Unit | Gedung Building | Sipil Civil | Khusus Specialized | Konstruksi Construction |
|-----|---|--|------------------------|--------------------|---------------------------|--------------------------------|
| | (1) | (2) | (3) | (4) | (5) | (6) |
| 1. | Banyaknya Sampel Usaha <i>Number of Establishment Samples</i> | usaha <i>establishment</i> | 15.735 | 2.803 | 5.070 | 23.608 |
| 2. | Rata-rata Pekerja Tetap <i>Average of Permanent Workers</i> | orang <i>person</i> | 2 | 2 | 1 | 2 |
| 3. | Rata-rata Pekerja Harian per Bulan <i>Average of Daily Workers Monthly</i> | orang <i>person</i> | 3 | 4 | 2 | 3 |
| 4. | Rata-rata Hari Orang Pekerja Harian <i>Average of Mandays of Daily Workers</i> | hari orang <i>mandays</i> | 406 | 360 | 170 | 350 |
| 5. | Rata-rata Bulan Kegiatan <i>Average of Active Months</i> | bulan <i>months</i> | 5 | 4 | 4 | 5 |
| 6. | Rata-rata Hari Kerja per Bulan <i>Average Working Days per Month</i> | hari <i>days</i> | 23 | 17 | 17 | 21 |
| 7. | Median Balas Jasa dan Upah Pekerja <i>Median of Compensation and Wages of Workers</i> | ribu rupiah <i>thousand rupiahs</i> | 41.690 | 27.060 | 15.000 | 33.540 |
| 8. | Median Nilai Konstruksi yang Diselesaikan <i>Median of Value of Construction Works Completed</i> | ribu rupiah <i>thousand rupiahs</i> | 90.000 | 40.000 | 16.000 | 54.000 |
| 9. | Median Pengeluaran <i>Median of Expenses</i> | ribu rupiah <i>thousand rupiahs</i> | 149.390 | 88.170 | 42.403 | 112.590 |
| 10. | Median Pendapatan <i>Median of Income</i> | ribu rupiah <i>thousand rupiahs</i> | 170.000 | 100.000 | 49.920 | 127.100 |
| 11. | Median Persentase Keuntungan <i>Median of Profit Percentage</i> | % | 7,89 | 8,98 | 9,67 | 8,35 |
| 12. | Median Nilai Bahan/Material Konstruksi <i>Median of Construction Material Used</i> | ribu rupiah <i>thousand rupiahs</i> | 97.500 | 48.235 | 21.000 | 70.000 |
| 13. | Indeks Kondisi Bisnis <i>Business Condition Indices</i> | - | 60,24 | 58,57 | 58,41 | 59,65 |
| 14. | Indeks Prospek Bisnis <i>Business Prospect Indices</i> | - | 61,95 | 59,13 | 60,77 | 61,36 |
| 15. | Indeks Masalah Bisnis <i>Business Problems Indices</i> | - | 15,02 | 16,91 | 18,17 | 15,85 |

Catatan/Note :

Indeks Masalah Bisnis / *Business Problems Index (IMB)*

IMB = 0 % : Tidak Bermasalah / *Not Problematic*

0 % < IMB ≤ 50 % : Sedikit Bermasalah / *Less Problematic*

50 % < IMB ≤ 100 % : Bermasalah / *Problematic*

Prospek dan Kondisi Bisnis / *Business Prospect and Condition (PKB)*

PKB = 100% : Semua pengusaha optimis akan usahanya / *All the response are optimistic*

PKB > 50 % : Pengusaha cenderung optimis akan usahanya / *Entrepreneur tend to be optimistic about their business*

PKB = 50 % : Pengusaha seimbang antara optimis dan pesimis / *Number of response optimistic and pesimistic equal*

PKB < 50 % : Pengusaha cenderung pesimis akan usahanya / *Entrepreneur tend to be pesimistic about their business*

PKB = 0 % : Semua pengusaha pesimistis akan usahanya / *All the response are pesimistic*

Tabel 2 Banyaknya Sampel Usaha Konstruksi Perorangan Menurut Provinsi dan Bidang Pekerjaan, 2022
Table **Number of Micro-Construction Establishment Samples by Province and Activity, 2022**

| Provinsi Province | Gedung Building | Sipil Civil | Khusus Specialized | Jumlah Total |
|---------------------------|--------------------|----------------|-----------------------|-----------------|
| (1) | (2) | (3) | (4) | (5) |
| Aceh | 745 | 88 | 267 | 1.100 |
| Sumatera Utara | 1.137 | 201 | 271 | 1.609 |
