Jadi curah hujan 1 mm adalah jumlah air yang turun dari langit sebanyak $1 \text{ mm} \times 1\text{m} \times 1\text{m} = 0,001 \text{ m}^3 = 1 \text{ liter}$.

Rainfall is calculated by units of mm (millimeters), that is, the height of water that is accommodated in an area of $1\text{m} \times 1\text{m}$ aka 1 meter square (m^2). So 1 mm rainfall is the amount of water that drops from the sky as much as $1 \text{ mm} \times 1\text{m} \times 1\text{m} = 0.001 \text{ m}^3 = 1 \text{ liter}$.

PENJELASAN TEKNIS

1. Sumber utama data kependudukan adalah sensus penduduk yang dilaksanakan setiap sepuluh tahun sekali. Sensus penduduk telah dilaksanakan sebanyak enam kali sejak Indonesia merdeka, yaitu tahun 1961, 1971, 1980, 1990, 2000, dan 2010.

Di dalam sensus penduduk, pencacahan dilakukan terhadap seluruh penduduk yang berdomisili di wilayah teritorial Indonesia termasuk warga negara asing kecuali anggota korps diplomatik negara sahabat beserta keluarganya.

Metode pengumpulan data dalam sensus dilakukan dengan wawancara antara petugas sensus dengan responden dan juga melalui *e-census*. Pencatatan penduduk menggunakan konsep *usual residence*, yaitu konsep di mana penduduk biasa bertempat tinggal. Bagi penduduk yang bertempat tinggal tetap dicacah di mana mereka biasa tinggal, sedangkan untuk penduduk yang tidak bertempat tinggal tetap dicacah di tempat di mana mereka ditemukan petugas sensus pada malam 'Hari Sensus'. Termasuk penduduk yang tidak bertempat tinggal tetap adalah

TECHNICAL NOTES

1. *The main source of demographic data is population census, which is conducted every ten years. Population Census has been conducted six times since Indonesia's independence: 1961, 1971, 1980, 1990, 2000, and 2010.*

The population census enumerates all residents who domicile in the entire territory of Indonesia including foreign citizens except the diplomatic corps members and their families.

The method of data collection in a population census involves interviewing respondents and conducting e-census. Enumeration of the population uses the concept of "usual residence", which is the concept of "places where people usually live". De jure was applied to the permanent residents, while de facto was applied to non-permanent residents. The permanent residents were enumerated in place where they normally live the non-permanent residents were enumerated where they were found by the enumerators, on the night of 'Census Date'. The non permanent residents include homeless people, ship crew, boat people, remote area community, and internally displaced

tuna wisma, awak kapal berbendera Indonesia, penghuni perahu/rumah apung, masyarakat terpencil/terasing, dan pengungsi. Bagi mereka yang mempunyai tempat tinggal tetap dan sedang bepergian ke luar wilayah lebih dari enam bulan, tidak dicacah di tempat tinggalnya, tetapi dicacah di tempat tujuannya. Untuk tahun yang tidak dilaksanakan sensus penduduk, data kependudukan diperoleh dari hasil proyeksi penduduk. Proyeksi penduduk merupakan suatu perhitungan ilmiah yang didasarkan pada asumsi dari komponen-komponen perubahan penduduk, yaitu kelahiran, kematian, dan migrasi. Proyeksi penduduk Indonesia 2010–2035 menggunakan data dasar penduduk hasil SP2010.

2. **Penduduk Indonesia** adalah semua orang yang berdomisili di wilayah teritorial Indonesia selama 6 bulan atau lebih dan atau mereka yang berdomisili kurang dari 6 bulan tetapi bertujuan menetap.
3. **Laju pertumbuhan penduduk** adalah angka yang menunjukkan persentase penambahan penduduk dalam jangka waktu tertentu.

persons. Those who had permanent residence and had been travelling away from their home for six months or more were not enumerated in their permanent place, but in the place where they were during the census.

For the periods where the population census is not conducted, population projection is done to estimate population during those years. The population projection is an estimate based on the demographic components, such as birth, death, and migration. Indonesia's 2010–2035 population projection used the 2010 Population Census as the base population.

2. **The population of Indonesia** are all residents of the entire territory of Indonesia who have stayed for six months or longer, and those who intended to stay more than six months even though their length of stay is less than six months.
3. **The growth rate of population** is the number that show percentage of population growth within a specified period.

4. **Kepadatan penduduk** adalah rasio banyaknya penduduk per kilometer persegi.
 5. **Rasio jenis kelamin** adalah perbandingan antara penduduk laki-laki dan penduduk perempuan pada suatu wilayah dan waktu tertentu. Biasanya dinyatakan dengan banyaknya penduduk laki-laki untuk 100 penduduk perempuan.
4. **Population density** is ratio of population per square kilometer.
 5. **Sex ratio** is the ratio of males population to females population in a given area and time, usually expressed as the number of males for every 100 females.
