Survei Pertanian

PRODUKSI
PADI & PALAWIJA
DI JAWA TIMUR

Tahun 2006

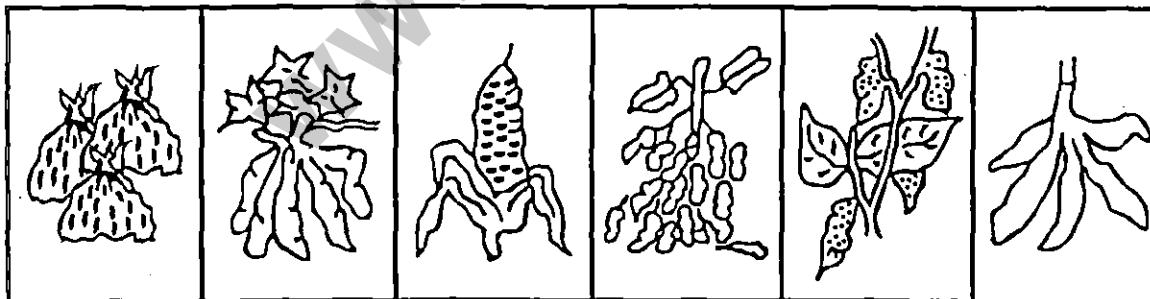

BADAN PUSAT STATISTIK PROVINSI JAWA TIMUR

Survei Pertanian

**PRODUKSI
PADI & PALAWIJA
DI JAWA TIMUR**

Tahun 2006

BADAN PUSAT STATISTIK PROPINSI JAWA TIMUR

KATA PENGANTAR

Publikasi Produksi Padi dan Palawija di Jawa Timur tahun 2006 ini merupakan kelanjutan dari publikasi sejenis yang telah diterbitkan secara rutin setiap tahun. Data yang disajikan dalam publikasi ini berasal dari hasil pengolahan Survei Pertanian daftar SP IA, SP IB, SP IV dan daftar II Ubinan.

Survei ini merupakan hasil kerjasama antara Badan Pusat Statistik dengan Direktorat Jendral Pertanian Tanaman Pangan Departemen Pertanian, beserta segenap jajarannya sampai tingkat Kabupaten/Kota. Untuk dapat menyajikan angka produksi sampai dengan tingkat Kabupaten/Kota, Provinsi Jawa Timur menambah sampel ubinan. Data luas panen dan data produksi yang disajikan dalam publikasi ini merupakan angka tetap yang sudah direkomendasikan secara nasional. Semoga publikasi ini bermanfaat bagi para pengguna data khususnya bagi instansi pengambil keputusan di Sektor Pertanian yang dapat digunakan sebagai bahan evaluasi kinerja dalam membuat kebijakan di masa mendatang.

Akhir kata, kritik dan saran sangat diharapkan demi perbaikan dan penyempurnaan untuk penerbitan publikasi selanjutnya.

Surabaya, Desember 2007

Kepala BPS Provinsi Jawa Timur

D J A M A L, S.E, M.Sc,
NIP. 340004373

1. PENJELASAN

1.1 Umum

Pertanian adalah sektor yang paling strategis, terlebih sub sektor tanaman padi dan palawija, karena disamping paling banyak menyerap tenaga kerja juga merupakan sumber makanan pokok penduduk. Dalam pembentukan Produk Domestik Bruto (PDB), sektor pertanian memberikan sumbangsih yang besar, tak heran apabila negara kita sering disebut sebagai negara graris. Pemerintah pun cukup banyak membuat kebijakan di sektor ini, seperti harga pupuk, harga terendah gabah yang tujuannya supaya kesejahteraan para petani meningkat.

Mengingat begitu strategisnya sektor ini, maka Badan Pusat Statistik Provinsi Jawa Timur memandang perlu untuk menerbitkan publikasi ini secara berkelanjutan dengan harapan akan banyak bermanfaat bagi para pengguna data maupun instansi pengambil keputusan di sektor ini.

1.2 Landasan Hukum

Dalam rangka penyusunan publikasi Survei Pertanian ini, sebagai landasan hukum adalah:

- Undang-undang Nomor 16 Tahun 2000 tentang Statistik,
- Keputusan Menteri Pertanian Nomor 527/Kpts/DP/II/1978 tanggal 9 Nopember 1978,

- Instruksi bersama Direktur Jendral Pertanian dan Kepala Biro Pusat Statistik Nomor 47 SP/DDP/XI/1972 tanggal 20 Nopember 1972,
- Instruksi Menteri Ekonomi, Keuangan dan Industri Nomor In/85/MEKUIN/73 tanggal 23 Januari 1973,
- Instruksi Menteri Dalam Negeri Nomor 3 tahun 1973,
- Instruksi Bersama Direktur Jendral Pertanian Tanaman Pangan dan Kepala Biro Pusat Statistik Nomor 20/DJPTP/VI/1975P. 2/1/II/1975 Tanggal 23 Juni 1975,
- Instruksi Bersama Direktur Jendral Pertanian Tanaman Pangan dan Kepala Biro Pusat Statistik Nomor I.HK.050.84.86041100288 Tanggal 17 Desember 1984 tentang keseragaman metoda untuk memperoleh kesatuan angka dan, Nomor 04110.143 I.HK.050617 tanggal 17 Agustus 1987 tentang ramalan dan pengolahan bersama data statistik padi dan palawija.

1.3 Data yang Dikumpulkan

Dalam survei ini dikumpulkan data tanaman pertanian, seperti tanaman padi, palawija, sayuran, buah-buahan, obat-obatan dan tanaman hias. Juga dikumpulkan data organisme jasad pengganggu tanaman, penggunaan lahan, alat pertanian dan pemberian, serta data mengenai produktivitas tanaman padi dan palawija per satuan luas.

Sedangkan publikasi ini hanya menyajikan data tanaman padi dan palawija serta produktivitasnya per satuan luas.

1.4 Metodologi

1.4.a.Konsep Definisi

Dalam survei ini digunakan beberapa konsep definisi penting sebagai berikut:

- **Blok Sensus** adalah satuan daerah kerja pencacahan yang merupakan bagian dari suatu desa yang mencakup sekitar 80-120 rumah tangga dan dibatasi oleh batas alam atau batas-batas lainnya yang jelas, seperti sungai, tanggul, pantai, jalan kereta api dan sebagainya. Penggunaan Blok Sensus sebagai satuan wilayah kerja dimulai sejak sub round-2 tahun 2005, sebagai pengganti wilayah pencacahan maupun segmen.
 - **Petani padi/palawija** adalah orang yang mengusahakan tanaman padi palawija dengan menanggung resiko sendiri.
 - **Bidang lahan** adalah suatu hamparan yang dimiliki/dikuasai seseorang dan dibatasi oleh penguasaan orang lain atau batas-batas alam lainnya.
 - **Petidak lahan** adalah bagian dari bidang lahan yang dibatasi oleh saluran/galengan tanaman maupun batas-batas lainnya.
 - **Lahan Sawah** adalah lahan pertanian yang berpetidak-petidak dan dibatasi oleh pemafang (galengan), saluran untuk menahan/menyalurkan air, yang biasanya ditanami padi sawah, tanpa memandang dari mana diperolehnya atau status lahan tersebut.

- **Luas Bersih** adalah luas sawah secara keseluruhan (luas kotor) dikurangi dengan luas pematang (galengan) dan saluran air.
 - **Luas Panen Berhasil** adalah luas tanaman yang dipungut hasilnya setelah tanaman tersebut cukup umur.
 - **Luas Panen Muda** adalah luas tanaman yang dipungut hasilnya sebelum tanaman tersebut cukup umur. Tanaman yang dapanen muda hanya tanaman jagung dan tanaman kedelai.
 - **Luas Rusak (tidak berhasil)** adalah luas tanaman yang mengalami serangan organisme pengganggu tumbuhan atau bencana alam, sehingga hasilnya kurang dari 11 % dari keadaan normal.
 - **Luas Penanaman** adalah luas tanaman yang betul-betul di tanam pada bulan laporan, baik sebagai penanaman normal atau penanaman untuk mengganti tanaman yang dibabat/dimusnahkan.
 - **Padi Sawah** adalah padi yang ditanam di lahan sawah.
 - **Padi Ladang** adalah padi yang ditanam di tegal, kebun, ladang atau huma.

1.4.b. Metode Pencacahan

Metode yang dipakai dalam survei ini adalah :

- a. Metode Pencacahan Lengkap. Metode ini digunakan untuk mengumpulkan data mengenai luas panen, luas rusak/puso, luas penanaman, luas tanaman akhir bulan di seluruh kecamatan dalam wilayah Jawa Timur secara rutin setiap bulan.

b. Metode Pencacahan Sampel. Metode ini digunakan untuk mengumpulkan data mengenai produktivitas tanaman padi dan palawija per satuan luas. Pada blok sensus terpilih, di rumah tangga terpilih. Sebelumnya pada blok sensus terpilih tersebut telah dilakukan *listing* terlebih dahulu guna menentukan rumah tangga terpilih yang mengusahakan tanaman padi dan palawija.

1.4.c.Dokumen yang Digunakan

Dalam Survei ini digunakan daftar/dokumen sebagai berikut :

| Jenis Daftar | Uraian | Frekuensi |
|--------------|-------------------------------|----------------|
| SP-IA | Luas Tanaman Padi | Bulanan |
| SP-IB | Luas Tanaman Palawija | Bulanan |
| SP-IV | Keterangan Pengganggu Tanaman | Bulanan |
| Daftar I | Pendaftaran Rumah tangga | Sub round |
| Daftar I.1 | Jadual Ubinan | Sub round |
| Daftar II | Keterangan Hasil Ubinan | Jadual panenan |

1.4.d.Alokasi Ubinan

Target jumlah ubinan untuk setiap kabupaten, ditentukan oleh BPS per jenis tanaman. Target tersebut selanjutnya dialokasikan secara proporsional dengan jumlah pefidak untuk tiap kelompok blok sensus terpilih, ini untuk mendapatkan estimasi produksi padi dan palawija tingkat Nasional, yang disebut dengan Ubinan Pusat. Disamping ubinan pusat, ada ubinan prakarsa sebagai sampel ubinan

tambahan atas prakarsa dari daerah. Ubinan prakarsa ini dialokasikan dengan cara yang sama dengan ubinan pusat, dengan tujuan untuk memperoleh estimasi produksi padi dan palawija pada tingkat yang lebih kecil. Jumlah Alokasi Ubinan per Kabupaten/Kota adalah sebagai berikut:

Tabel 1. Alokasi Sampel Blok Ubinan Pusat per Sub round Tahun 2006.

| No | Kabupaten/Kota | Jan-Apr | Mei-Agt | Sep-Des | Jumlah |

1.4.e. Pengolahan

Luas panen tingkat kabupaten/kota merupakan penjumlahan laporan pada tingkat kecamatan dari kuesioner SP IA dan SP IB. Luas panen pada tingkat provinsi merupakan rekapitulasi angka tingkat kabupaten. Dengan catatan untuk lahan sawah dilakukan konversi galengan untuk mendapatkan luas bersih dari luas kotor, dengan faktor pengali sebagai berikut:

Tabel 3. Konversi Galengan, untuk mendapatkan Luas Bersih.

| No. | Kabupaten | Konversi | No. | Kabupaten | Konversi |
|-----|-------------|----------|-----|------------|----------|
| 01. | Pacitan | 0,8775 | 16. | Mojokerto | 0,9481 |
| 02. | Ponorogo | 0,9504 | 17. | Jombang | 0,9666 |
| 03. | Trenggalek | 0,9807 | 18. | Nganjuk | 0,9557 |
| 04. | Tulungagung | 0,9633 | 19. | Madiun | 0,9471 |
| 05. | Blitar | 0,9494 | 20. | Magetan | 0,9550 |
| 06. | Kediri | 0,9633 | 21. | Ngawi | 0,9647 |
| 07. | Malang | 0,9615 | 22. | Bojonegoro | 0,9683 |
| 08. | Lumajang | 0,9573 | 23. | Tuban | 0,9634 |
| 09. | Jember | 0,9774 | 24. | Lamongan | 0,9633 |
| 10. | Banyuwangi | 0,9649 | 25. | Gresik | 0,9747 |
| 11. | Bondowoso | 0,9705 | 26. | Bangkalan | 0,9511 |
| 12. | Situbondo | 0,9616 | 27. | Sampang | 0,9631 |
| 13. | Probolinggo | 0,9676 | 28. | Pamekasan | 0,9760 |
| 14. | Pasuruan | 0,9668 | 29. | Sumenep | 0,9795 |
| 15. | Sidoarjo | 0,9566 | | | |

Perkiraan hasil per hektar tingkat Kabupaten/Provinsi dilakukan sebagai berikut :

$$Y_k = \frac{\sum_{i=1}^n Y_{ki}}{n_k}$$

Y_k = Perkiraan hasil per hektar pada suatu kabupaten/Provinsi ke k

Y_{ki} = Hasil per hektar untuk ubinhan ke i dari kabupaten/Provinsi ke k yang dilaporkan menggunakan Daftar II

n_k = Banyaknya ubinan terpilih kabupaten/Provinsi ke k

Untuk perhitungan produksi dalam berbagai bentuk, maka digunakan tabel faktor konversi bahan makanan sebagai berikut:

Tabel 4. Faktor Konversi Komoditas Padi

| BENTUK AKHIR | A | B | C | D | E |
|--------------------------------|----------|----------|----------|----------|----------|
| A. Gagang Basah (Panen) | 100 | 130 | 144 | 170 | 250 |
| B. Gabah Kering Panen (giling) | 77 | 100 | 111 | 131 | 192 |

1.4.f. Alokasi Pekerjaan

Laporan luas tanaman padi dan palawija dibuat oleh KCD/Mantri Tani secara bulanan terhadap seluruh kecamatan. Sedangkan pelaksanaan ubinan dikerjakan sekitar 50 % oleh KCD dan sisanya dikerjakan oleh KSK (Koordinator Statistik Kecamatan)/Mantri Statistik.

2. ULASAN RINGKAS

2.1 Produksi Padi

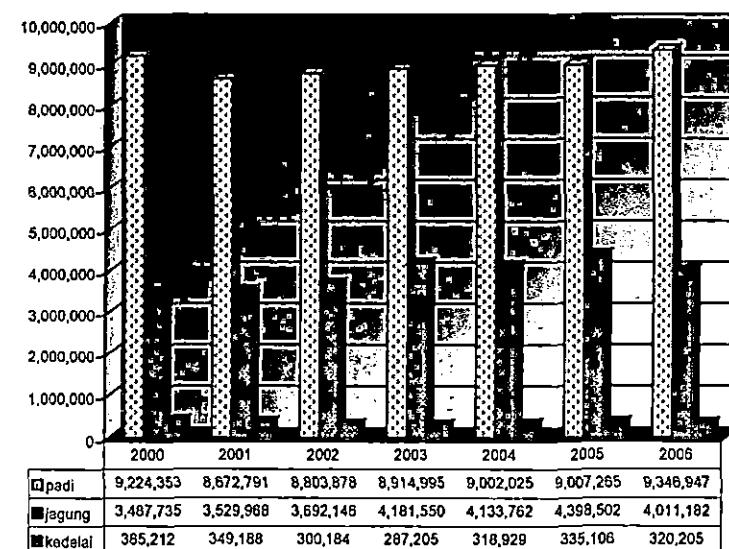

Di Indonesia, beras adalah bahan makanan pokok bagi sebagian besar penduduk. Oleh karenanya, beras menjadi komoditi strategis dalam pembangunan nasional secara luas dan khususnya dalam pembangunan sektor pertanian di Jawa Timur. Keberadaannya menjadi suatu keharusan sehingga pemerintah senantiasa menitikberatkan perhatiannya pada jenis komoditas ini.

Seperti diketahui bahwa permintaan terhadap beras tetap akan terus meningkat sejalan dengan pertambahan penduduk, peningkatan pendapatan masyarakat serta pertumbuhan sektor industri yang menggunakan beras sebagai bahan baku. Negara kita pernah menjadi salah satu eksportir yang potensial di antara negara-negara lain, namun dewasa ini seperti yang banyak diberitakan oleh banyak masmedia kondisinya menjadi berlawanan. Dewasa ini pasokan komoditas beras menjadi semakin terbatas. Diduga, faktor-faktor yang menjadi penyebabnya adalah: 1. semakin bertambahnya penduduk; 2. bertambahnya penduduk yang merubah pola konsumsi, dari makanan pokok lainnya menjadi beras; 3. terjadinya penambahan penimbunan padi di rumah tangga petani padi, yang menurut informasi sekitar 1/3 bagian dari produksi padi disimpan oleh petani padi. Dengan pergeseran-pergeseran ini maka dimungkinkan pasokan produksi padi jadi berkurang, yang

pada akhirnya untuk memenuhi kebutuhan masyarakat perlu dilakukan impor beras.

Provinsi Jawa Timur merupakan lumbung padi yang produksi padinya mengalami surplus. Oleh karena itu, Gubernur Jawa Timur telah melarang impor beras masuk melalui wilayah Jawa Timur sejak tahun 2004 karena pada periode ini produksi padi di Jawa Timur mengalami surplus. Pelarangan masuknya komoditi beras ini juga dimaksudkan untuk melindungi petani sehingga para petani kita memiliki posisi tawar yang lebih menguntungkan untuk hasil produksi berasnya walaupun produksi beras dalam keadaan surplus.

Gbr 1. Produksi Padi, Jagung dan Kedelai 2000-2006 (ton)

Produksi padi di Jawa Timur, dalam bentuk Gabah Kering Giling (GKG), pada tahun 2006 mengalami peningkatan cukup tinggi mencapai 9.346.947 ton, naik 3,77 persen dibandingkan tahun sebelumnya. Angka ini cukup fantastis mengingat pada tahun 2002 hingga tahun 2005 rata-rata kenaikan produksi padi hanya 0,95 persen. Bahkan angka ini merupakan angka produksi padi tertinggi di Jawa Timur sejak tahun 2000, setelah sempat mengalami penurunan pada tahun 2001 sebesar 5,98 persen.

2.2 Produksi Palawija

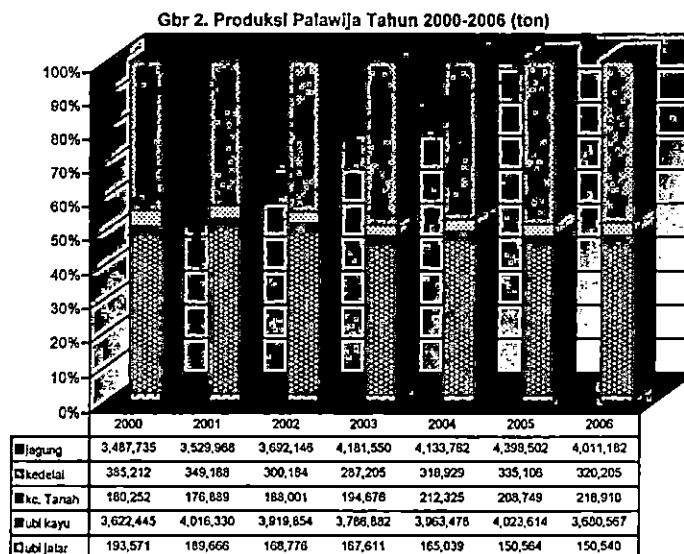

Jawa Timur merupakan wilayah sentra produksi jagung tertinggi di Indonesia dengan luas panen mencapai 1,1 juta hektar. Di provinsi ini, komoditas Jagung sebagian besar dipasarkan untuk memenuhi pasokan industri pengolah makanan termasuk juga untuk industri pengolah makanan hewan. Di sebagian masyarakat juga masih ada yang mengonsumsi jagung sebagai tambahan makanan pokok yang dicampurkan dengan beras.

Produksi jagung di Jawa Timur, dalam bentuk pipilan kering/ose, selama periode 2000-2006 mengalami rata-rata peningkatan sebesar 2,58 persen. Pada tahun 2001 produksi jagung naik sekitar 1,21 persen dibanding tahun sebelumnya. Kemudian pada tahun 2002 naik sekitar 4,59 persen dan terus meningkat di tahun sesudahnya hingga mencapai 13,26 persen. Produksi jagung sempat menurun pada tahun 2004 sebesar 1,14 persen, diikuti kenaikan sebesar 6,4 persen pada tahun 2005. Pada tahun 2006, produksi jagung kembali

mengalami penurunan sebesar 8,81 persen, produksinya lebih rendah jika dibandingkan dengan tahun 2004, yaitu 4.011.182 ton.

Produksi kedelai dalam bentuk pipilan kering/ose kembali mengalami penurunan pada tahun 2006. Jika dibandingkan tahun 2005, penurunan ini mencapai 4,45 persen. Pada periode 2000-2003 produksi kedelai terus menurun dengan laju penurunan rata-rata sekitar 9,24 persen setelah mengalami kenaikan pada tahun 2004 dan 2005.

Kebutuhan akan kedelai terus meningkat sejalan dengan kebutuhan industri pengolah makanan seperti tempe tahu. Kontribusi Jawa Timur terhadap penyediaan kedelai lokal cukup besar jika

dibandingkan dengan provinsi lain di negara ini. Minimnya pasokan kedelai lokal disebabkan menurunnya luas panen secara terus-menerus (hampir setiap tahun, kecuali tahun 2004 dan 2005) diikuti rendahnya produktivitas kedelai di Jawa Timur (hanya berkisar 12 ku/ha). Seharusnya komoditas ini dapat menjadi primadona, namun karena kualitas dan harga produk lokal kurang mampu bersaing, maka pemerintah masih perlu melakukan impor kedelai. Selain itu, yang menyebabkan tanaman ini semakin turun produksinya adalah karena tanaman kedelai memerlukan ongkos produksi yang lebih banyak dari mulai proses penanaman, perawatan, hingga proses pengeringan dan pemipilan, sehingga petani semakin kurang minatnya untuk menanam kedelai dan lebih cenderung memilih jenis tanaman palawija lainnya, seperti jagung.

Produksi tanaman palawija yang lainnya mengalami pergeseran yang berbeda. Produksi kacang tanah selama periode 2002-2004 cenderung meningkat. Penurunan produksi terjadi pada tahun 2001 dan 2005, sedangkan puncak produksi terjadi pada tahun 2006 hingga mencapai 218.910 ton.

Pada tahun 2005 produksi ubi kayu mengalami kenaikan. Namun di tahun 2006, komoditi ubi kayu kembali mengalami penurunan 8,53 persen dibandingkan tahun 2005. Penurunan ini merupakan penurunan produksi tertinggi jika dibandingkan yang terjadi pada tahun 2002-2003. Demikian pula dengan produksinya, pada tahun 2006, produksi ubi kayu mencapai jumlah terendah jika

dibandingkan produksi ubi kayu secara berturut-turut 5 tahun sebelumnya. Sedangkan produksi ubi jalar selama periode 2000-2006 mengalami penurunan terus menerus dengan rata-rata penurunan sekitar 4 persen per tahun.

Puncak produksi palawija selama periode 2000-2006 terjadi pada tahun 2005, meskipun tidak setiap komoditi palawija pada tahun tersebut produksinya tertinggi dibandingkan pada tahun lainnya. Produksi kedelai misalnya, tertinggi pada tahun 2000 mencapai 385.212 ton, produksi ubi jalar mencapai produksi tertinggi pada tahun 2000 yaitu sebesar 193.571 ton, produksi kacang tanah mencapai produksi tertinggi pada tahun 2004 yaitu sebesar 212.325 ton. Tingginya produksi palawija keseluruhan pada tahun 2005 (naik sekitar 3,67 persen terhadap tahun 2004) dipacu oleh naiknya produksi jagung, kedelai dan ubi kayu. Pada tahun 2006, produksi palawija secara keseluruhan justru mengalami penurunan yang signifikan, mencapai 8,06 persen. Ini adalah tahun pertama turunnya produksi palawija secara total dalam kurun waktu 7 tahun.

Tanaman palawija yang produksinya paling menonjol adalah jagung dan ubi kayu. Ini adalah wajar karena kedua komoditi tersebut merupakan komoditi substitusi dari padi dan banyak digunakan oleh industri pengolah makanan. Pada tahun 2001 produksi ubi kayu mengalami kenaikan yang cukup tinggi, kemudian pada tahun berikutnya produksi ubi kayu mengalami penurunan.

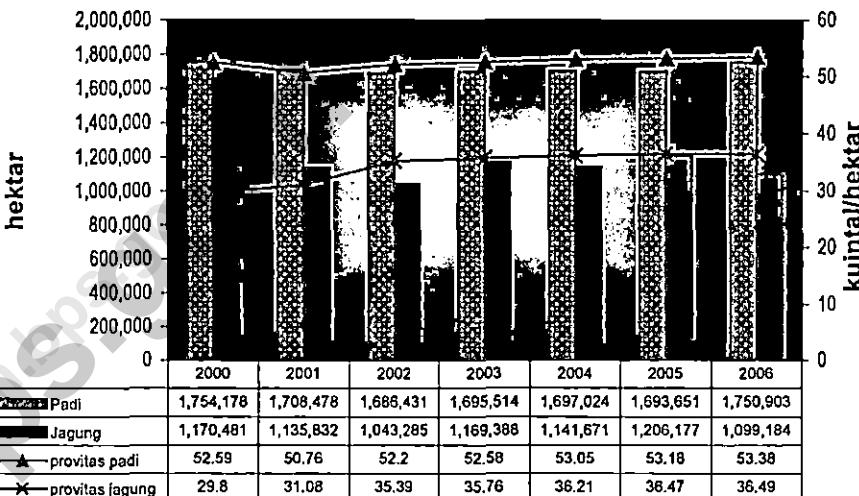

Dengan perkembangan total produksi padi dan palawija yang cukup stabil, maka bahan pangan yang tersedia akan mencukupi untuk kebutuhan Jawa Timur, baik sebagai makanan pokok maupun subsitusinya.

2.3 Luas Panen Tanaman Padi

Kondisi iklim yang kondusif nampaknya cukup mempengaruhi peningkatan produksi padi pada periode 2000-2006. Faktor ini ternyata cukup mendukung dan mampu menyediakan air yang cukup bagi petani untuk mengolah lahan dan tanaman padi semaksimal mungkin. Selain pasokan air dari iklim, untuk daerah tertentu yang sumber airnya kurang dan untuk antisipasi musim kering telah disediakan banyak mesin pompa melalui program pompanisasi. Peningkatan produksi padi yang cukup tinggi pada tahun 2006 tentu saja disebabkan pula oleh luas panen dan produktivitas yang tinggi.

Penurunan produksi padi pada tahun 2001 bisa jadi disebabkan oleh berkurangnya luas panen dan diikuti oleh pengurangan produktivitas. Pengurangan luas panen ini juga terjadi pada tahun 2002 dan 2005, namun pada periode ini masih diimbangi dengan peningkatan produktivitas sehingga total produksinya meningkat dibandingkan tahun 2001. Secara umum dalam periode lima tahun terakhir produksi padi rata-rata mengalami kenaikan sekitar 1,5 persen.

Gbr. 3. Luas Panen (ha) dan Produktivitas Padi dan Jagung (ku/ha), 2000-2006

Peningkatan produktivitas diantaranya disebabkan oleh kondisi iklim yang kondusif, dan penerapan sistem intensifikasi yang lebih baik dari periode sebelumnya. Sedangkan pengurangan luas panen dapat disebabkan antara lain oleh mutasi lahan pertanian maupun pengaruh internal petani yang enggan menanam padi.

Meningkatnya harga produk pertanian (padi) dapat merangsang petani untuk meningkatkan produksi padi, yang pada akhirnya diikuti dengan cara meningkatkan luas tanam/panen. Meskipun harga produk pertanian meningkat namun disamping itu juga terjadi peningkatan biaya produksi pertanian, yang ditandai dengan meningkatnya harga pupuk, obat-obatan, upah buruh dan lain-lain,

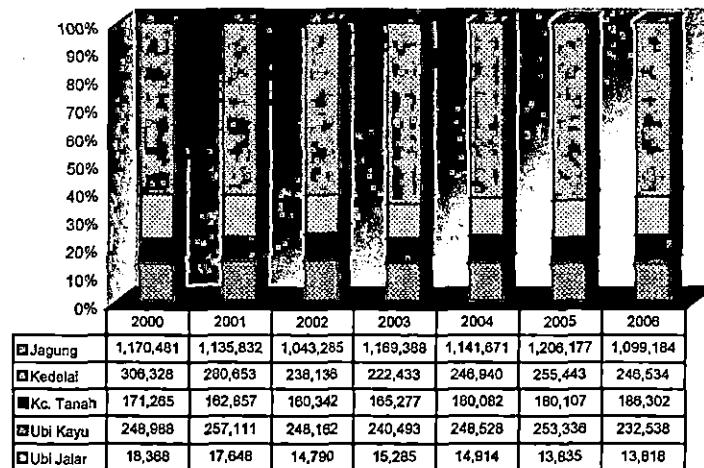

sehingga timbul masalah lainnya yaitu biaya produksi yang tinggi. Dua komponen tersebut, yaitu antara nilai produksi dengan biaya yang dikeluarkan, menjadi pertimbangan petani untuk berproduksi dan memasarkan hasil produk pertaniannya. Selama periode 2003-2004 luas panen padi meningkat masing-masing sekitar 0,54 persen dan 0,09 persen. Kenaikan tersebut akan sangat berarti apabila didukung kenaikan produktivitasnya. Rata-rata produksi per hektar pada tahun 2004 naik 0,89 persen disbanding tahun 2003 menjadi 53,05 ku/ha. Sedangkan pada tahun 2006 naik sekitar 0,38 persen menjadi 53,38 ku/ha. Pada tahun 2001 penurunan tidak saja terjadi pada luas panennya, tapi juga terjadi pada tingkat produktivitasnya. Luas panen pada tahun 2001 mengalami penurunan sekitar 2,61 persen, sedangkan tingkat produktivitasnya mengalami penurunan sekitar 3,48 persen. Penurunan luas panen berlanjut pada tahun 2002. Hal ini disebabkan musim kering yang berkepanjangan pada tahun tersebut. Namun, dengan mempertahankan penerapan pola intensifikasi, produktivitasnya masih mampu ditingkatkan.

2.4 Luas Panen Tanaman Palawija

Total luas panen palawija secara keseluruhan, bila dibandingkan dengan luas panen padi, perbandingannya hampir mendekati 50:50. Namun, perbandingan itu berfluktuasi 52:48 pada tahun 2000, 2001, 2002 dan 2004, 53:47 pada tahun 2005 dan 50:50 pada tahun 2002 dan 2006.

Pada tahun 2006 luas panen palawija keseluruhan mencapai 1.778.376 hektar, sedikit lebih luas dari luas panen padi sebesar 1.750.903 hektar. Dari total luas panen palawija, luas panen jagung adalah yang terbesar yaitu mencapai 1.099.184 hektar (sekitar 61,8 persen). Sedangkan luas panen ubi jalar merupakan yang terkecil, yakni hanya mencapai 13.818 hektar (sekitar 0,78 persen). Luas panen tanaman palawija lainnya berturut-turut dari yang terluas yaitu kedelai, ubi kayu dan kacang tanah masing-masing sekitar 13,86 persen; 13,07 persen; dan 10,48 persen.

Gbr 4. Luas Panen Palawija 2000-2006 (ha)

Selama periode 2000-2002 luas panen palawija cenderung turun. Pada periode ini luas panen palawija rata-rata turun sekitar 5,63 persen. Penurunan tertinggi terjadi pada tahun 2002 yaitu sebesar

8,06 persen. Kemudian luasnya kembali meningkat pada tahun 2003-2005 dengan kenaikan rata-rata sekitar 3,87 persen dan pada tahun 2006 luasnya menurun cukup tajam sekitar 6,84 persen.

Penurunan luas panen palawija tahun 2006 disebabkan oleh turunnya luas panen jagung, kedelai, ubi kayu dan ubi jalar. Penurunan produksi palawija pada tahun 2006 dikarenakan menurunnya produktivitas hampir seluruh komoditi palawija pada tahun ini, demikian juga dengan luas panennya.

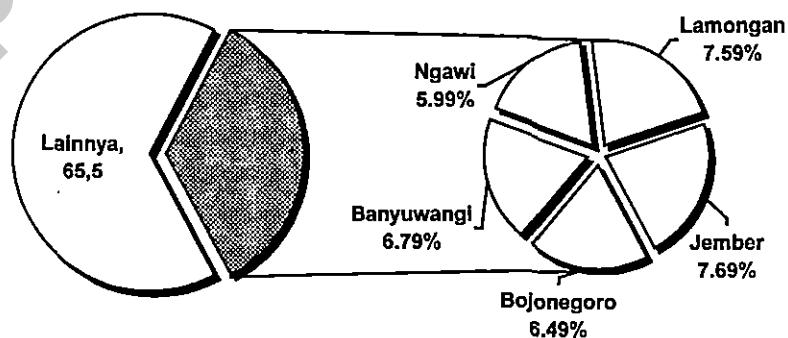

Produktivitas tanaman jagung selama periode 2000-2006 terus meningkat, dengan range antara 27-36 ku/ha. Tanaman palawija lainnya, selain jagung, selama periode tersebut produktivitasnya masih fluktuatif. Produktivitas tanaman kedelai mengalami peningkatan pada periode 2003-2005, kecuali tahun 2006 malah mengalami penurunan 0,13 ku/ha. Ini juga terjadi pada komoditi kacang tanah, ubi kayu dan ubi jalar. Variasi produktivitas tanaman kacang tanah tidaklah begitu besar, berkisar 12 ku/ha. Sedangkan variasi produktivitas ubi kayu dan ubi jalar empat tahun terakhir cukup besar, yaitu antara 157-159 ku/ha untuk ubi kayu dan antara 109-111 ku/ha untuk ubi jalar.

2.5 Produksi Padi per Kabupaten

Lima daerah pemasok padi terbesar di Jawa Timur pada tahun 2006 adalah: Jember, Lamongan, Banyuwangi, Bojonegoro, dan Ngawi. Ada 2 hal yang menyebabkan produksi padi di lima daerah tersebut

lebih banyak dari daerah-daerah lainnya di Jawa Timur; pertama, luas panen di lima daerah ini juga yang terbesar di Jawa Timur; kedua, tingkat produktivitas padi di atas rata-rata tingkat produktivitas petani padi di seluruh Jawa Timur (53,38 ku/ha) kecuali Jember (51,63 ku/ha). Pada tahun 2006, produktivitas padi di Jawa Timur mengalami kenaikan dari tahun sebelumnya yang sekitar 53,05 ku/ha menjadi 53,38 ku/ha.

Gbr.5. Daerah Potensi Padi di Jawa Timur, 2006 (%)

Tiga daerah yang mempunyai produksi padi paling rendah adalah Pamekasan, Trenggalek, dan Sumenep. Tahun 2006 produksi padi di Pamekasan sebanyak 96,04 ribu ton, di Trenggalek sebanyak 114,6 ribu ton, dan di Sumenep sekitar 126,7 ribu ton. Ini karena selain produktivitasnya masih kurang (terutama di Pamekasan hanya 44,17

ku/ha), juga luas panen padi di daerah tersebut paling kecil dibandingkan kabupaten lainnya di Jawa Timur.

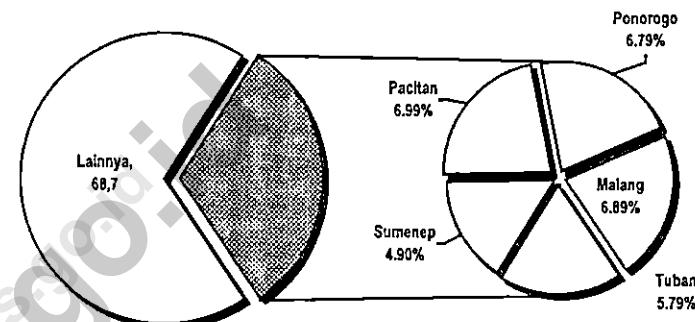

Pada tahun 2006, daerah yang tingkat produktivitas padi paling rendah di Jawa Timur adalah Kabupaten Pamekasan (44,17 ku/ha). Daerah lain di Madura yang memiliki tingkat produktivitas jauh dibawah rata-rata Jawa Timur (kurang dari 45 ku/ha) adalah Bangkaian dengan produktivitas sebesar 41,81 ku/ha. Hal ini menunjukkan bahwa di daerah-daerah tersebut, penerapan teknologi pertanian menemui hambatan yang signifikan. Hambatan tersebut bisa dikarenakan kurang suburnya lahan atau iklim yang tidak kondusif, penyediaan/pemanfaatan saprodi yang terbatas, dan dapat juga diakibatkan oleh perilaku teknologi petani yang terbatas.

2.6 Produksi Palawija per Kabupaten

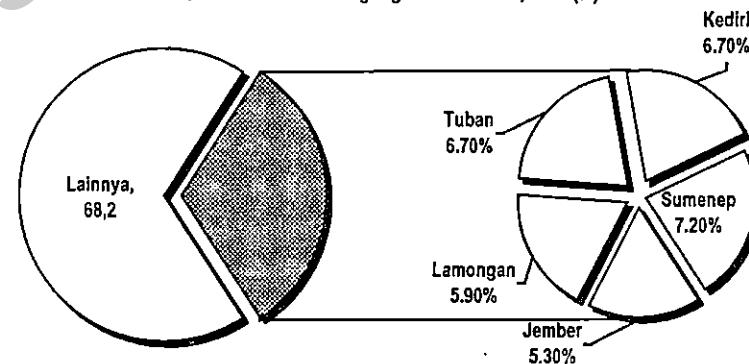

Produksi palawija tahun 2006 di Jawa Timur dibandingkan tahun 2005 kondisinya menurun. Lima daerah potensi palawija di Jawa Timur secara berurut dari yang terbesar adalah: Pacitan, Ponorogo, Malang, Tuban dan Sampang.

Di Kabupaten Sidoarjo tanaman palawija tampaknya sangat kurang karena hampir seluruh tanaman palawija produksinya terendah. Hal ini disebabkan oleh dukungan pengairan sungai Brantas yang cukup, mengakibatkan petani cenderung memanfaatkan lahan yang terbatas untuk ditanami padi saja.

Gbr.6. Daerah Potensi Palawija di Jawa Timur, 2006 (%)

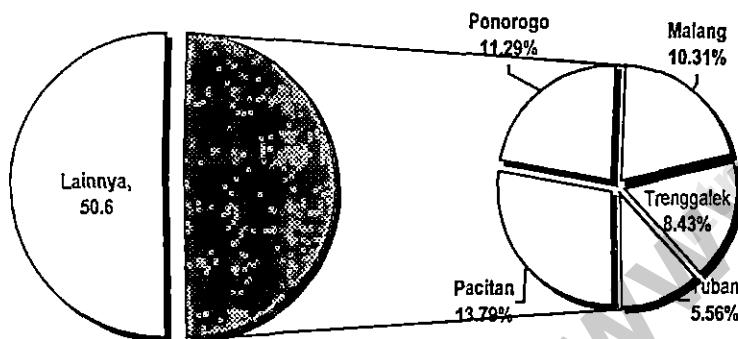

Gbr.7. Daerah Potensi Jagung di Jawa Timur, 2006 (%)

Untuk tanaman jagung, lima daerah penghasil terbanyak pada tahun 2006 secara berurut dari yang terbesar adalah Sumenep, Tuban, Kediri, Lamongan, dan Jember. Ini disebabkan luas panen jagung di daerah tersebut lebih besar dibanding daerah lainnya, di Sumenep luas panen jagung mencapai 124,5 ribu hektar, di Tuban 76,27 ribu hektar, Kediri 48,23 ribu hektar, di Lamongan 54,18 ribu

hektar, dan di Jember 42,44 ribu hektar. Daerah Sumenep memiliki luas panen jagung terluas yaitu sekitar 124,5 ribu hektar, akan tetapi produktivitas komoditi jagung di daerah ini hanya 23,11 ku/ha atau masih dibawah rata-rata Provinsi yang mencapai tingkat produktivitas sebesar 36,49 ku/ha pada tahun 2006. Produktivitas jagung di Magetan adalah yang tertinggi di Jawa Timur yaitu sekitar 56,72 ku/ha, sedangkan terendah di Sampang yaitu sekitar 19,52 ku/ha.

Gbr.8. Daerah Potensi Ubi Kayu di Jawa Timur, 2006 (%)

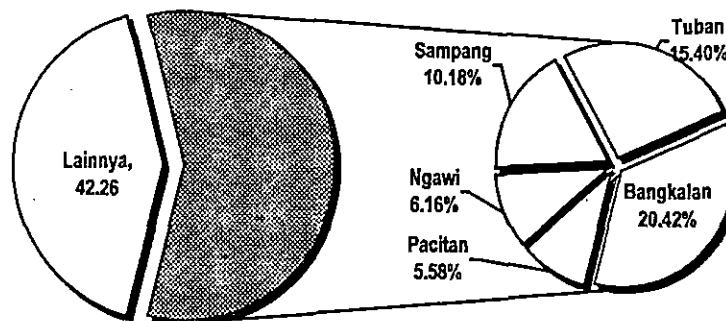

Ada lima daerah dengan produksi ubi kayu terbanyak di Jawa Timur, yakni Pacitan, Ponorogo, Malang, Trenggalek, Tuban pada tahun 2006. Faktor utama yang menyebabkan produksi ubi kayu di daerah ini lebih banyak dibandingkan dengan daerah lainnya adalah besarnya luas panen dan produktivitas yang di atas rata-rata, kecuali Pacitan dan Ponorogo yang produktivitasnya masih lebih rendah, namun demikian luas panen ubi kayu di Pacitan (36,39 ribu

hektar) dan Ponorogo (27,49 ribu hektar) cukup dominan, bahkan kedua kabupaten tersebut luas panennya masing-masing berada pada peringkat pertama dan kedua.

Pada periode 2000-2006, produksi ubi jalar selalu turun, dengan rata-rata penurunan sekitar 4 persen. Produksi Komoditi Ubi Jalar pada tahun 2006 terbanyak ada di Magetan (23,23 ribu ton), Malang (23,13 ribu ton); Ngawi (14,6 ribu ton); Bangkalan (14,33 ribu ton) dan Sampang (12,38 ribu ton). Sedangkan luas panen ubi jalar 5 terbesar masing-masing di Magetan (2,2 ribu hektar), Bangkalan (1,8 ribu hektar), Malang (1,7 ribu hektar), Sampang (1,6 ribu hektar) dan Ngawi (1,2 ribu hektar). Produktivitas ubi jalar di Jawa Timur tahun 2005 adalah 108,94 ku/ha. Beberapa daerah seperti di Madura, Ponorogo, Blitar, Probolinggo, dan Nganjuk produktivitasnya masih jauh di bawah angka produktivitas Jawa Timur.

Gbr.9. Daerah Potensi Kacang Tanah di Jawa Timur, 2006 (%)

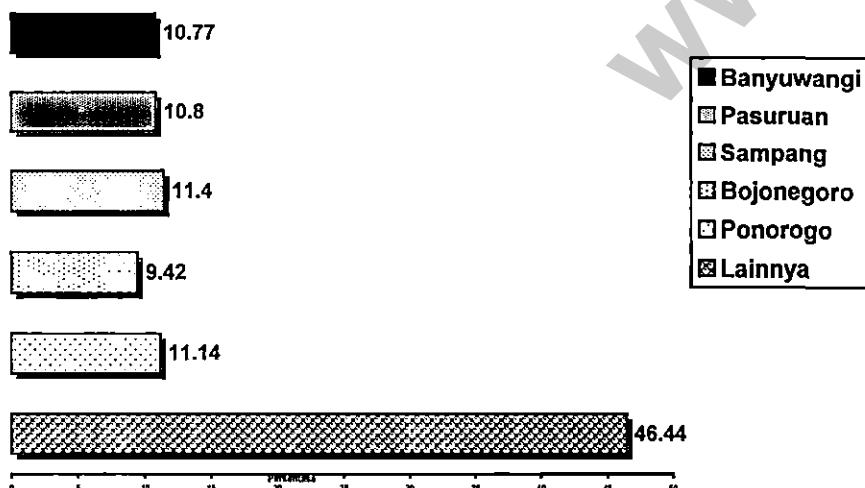

Untuk produk kacang tanah, pada tahun 2006 mengalami kenaikan produksi sekitar 4,87 persen, ini didukung oleh kenaikan luas panen pada periode tersebut yang besarnya sekitar 3,4 persen, yang secara resultan dapat menyebabkan kenaikan produksi komoditas ini.

Produksi kacang tanah tertinggi terjadi pada tahun 2006, ini lebih disebabkan oleh kenaikan luas panennya. Di Jawa Timur, daerah potensi kacang tanah terbesar pada tahun 2006 ada di Bangkalan, Tuban menduduki posisi kedua. Berturut-turut 5 terbesar penghasil kacang tanah di Jawa Timur adalah Bangkalan (44,7 ribu ton), Tuban (33,7 ribu ton), Sampang (22,3 ribu ton), Ngawi (13,47 ribu ton), dan Pacitan (12,2 ribu ton). Selain produksi yang besar ketiga daerah tersebut juga memiliki luas panen yang besar.

Daerah potensi kedelai pada tahun 2006 adalah Sampang, Ponorogo, Pasuruan, Banyuwangi dan Bojonegoro. Rata-rata produktivitas tanaman kedelai di daerah tersebut diatas rata-rata produktivitas Jawa Timur yang sekitar 12,99 ku/ha. Selain karena tingkat produktivitasnya yang relatif diatas rata-rata Jawa Timur, ternyata luas panen ke lima daerah tersebut di atas juga lebih besar dibandingkan dengan daerah lainnya.

Gbr.10. Daerah Potensi Kedele di Jawa Timur, 2006 (%)

**Tabel 1.1. Luas Panen, Hasil Per Hektar dan Produksi Padi (Sawah + Ladang)
Dirinci Per Kabupaten dan Subround Tahun 2006**
