Sub kategori hortikultura telah berkontribusi secara nyata dalam mendukung perekonomian nasional, baik dalam penyediaan produk pangan, kesehatan dan kosmetika, perdagangan, penciptaan produk domestik bruto maupun penyerapan tenaga kerja.

Agar pengembangan dan perumusan perencanaan kebijakan, dan evaluasi pembangunan tanaman hortikultura khususnya tanaman obat-obatan lebih tepat sasaran, maka data statistik tanaman obat sangat dibutuhkan oleh pemerintah dan pengusaha (dunia usaha). Hal ini sejalan dengan perkembangan perekonomian dan peningkatan kesadaran masyarakat untuk menjaga/merawat kesehatan dengan menggunakan pengetahuan cara pengobatan dan pencegahan penyakit yang bersumber dari tanaman obat.

2. DATA YANG DIKUMPULKAN

Dalam pengumpulan data Statistik Pertanian Hortikultura (SPH), dikumpulkan data tentang luas tanaman akhir triwulan yang lalu, luas tambah tanam, luas panen (habis dan belum habis), luas rusak/puso, luas tanaman akhir triwulan, produksi dari panen habis dan belum habis, satuan produksi dan harga jual petani tanaman biofarmaka.

Data Hortikultura Tanaman Biofarmaka yang dikumpulkan mencakup 15 (lima belas) jenis tanaman biofarmaka, yaitu jahe, laos/lengkuas, kencur, kunyit, lempuyang, temulawak, temuireng, temukunci, dringo, kapulaga, mengkudu/pace, mahkota dewa, kejibeling, sambiloto, dan lidah buaya.

Jika dilihat dari satuan luas panen dan bentuk hasilnya, tanaman biofarmaka dapat dibagi menjadi tanaman rimpang dan bukan rimpang.

Horticulture sub category has contributed significantly in supporting the national economy, availability of food products, health and cosmetics, trade, construction of gross domestic product, and absorption of workers.

In order to develop and formulate policy planning and evaluate development evaluation of horticulture especially Medicinal plant more precise of the target, statistical data of Medicinal plants are needed by government and businessman (business). This is in line with economic development and increasing public awareness to maintain/treat health by using knowledge on how to treat and prevent diseases originating from medicinal plants.

2. INFORMATION COLLECTED

In data collection Horticulture Survey, data on standing crops at the previous quarter, replanting area, harvested area (demolished and undemolished), damaged area, standing crops at the end of reporting quarter, production (demolished and undemolished), production unit, and producer price of Medicinal plants are collected.

The data of medicinal plants which is collected includes 15 (fifteen) type of plants, that are ginger, galanga, east indian galangal, turmeric, zingiber aromaticum, java turmeric, black turmeric, chinese keys, sweet root/calamus, java cardamom, indian mulberry, phaleria macrocarpa, verbenaceae, king of bitter, aloe vera.

Based on the unit of harvested area and form of product, medicinal plants can be divided into rhizome plants and non-rhizome plant.
