**KEPENDUDUKAN DAN
KETENAGAKERJAAN**
Population and Employment

PENJELASAN TEKNIS

1. Sumber utama data kependudukan adalah sensus penduduk yang dilaksanakan setiap sepuluh tahun sekali. Sensus penduduk telah dilaksanakan sebanyak enam kali sejak Indonesia merdeka, yaitu tahun 1961, 1971, 1980, 1990, 2000, dan 2010.

Di dalam sensus penduduk, pencacahan dilakukan terhadap seluruh penduduk yang berdomisili di wilayah teritorial Indonesia termasuk warga negara asing kecuali anggota korps diplomatik negara sahabat beserta keluarganya.

Metode pengumpulan data dalam sensus dilakukan dengan wawancara antara petugas sensus dengan responden dan juga melalui e-census. Pencatatan penduduk menggunakan konsep usual residence, yaitu konsep di mana penduduk biasa bertempat tinggal. Bagi penduduk yang bertempat tinggal tetap dicacah di mana mereka biasa tinggal, sedangkan untuk penduduk yang tidak bertempat tinggal tetap dicacah di tempat di mana mereka ditemukan petugas sensus pada malam ‘Hari Sensus’. Termasuk penduduk yang tidak bertempat tinggal tetap adalah

TECHNICAL NOTES

1. *The main source of demographic data is population census, which is conducted every ten years. Population Census has been conducted six times since Indonesia's independence: 1961, 1971, 1980, 1990, 2000, and 2010.*

The population census enumerates all residents who domicile in the entire territory of Indonesia including foreign citizens except the diplomatic corps members and their families.

The method of data collection in a population census involves interviewing respondents and conducting e-census. Enumeration of the population uses the concept of “usual residence”, which is the concept of “places where people usually live”. De jure was applied to the permanent residents, while de facto was applied to non-permanent residents. The permanent residents were enumerated in place where they normally live, the non-permanent residents were enumerated where they were found by the enumerators, on the night of ‘Census Date’. The non permanent residents include homeless people, ship crew, boat people, remote

tuna wisma, awak kapal berbendera Indonesia, penghuni perahu/rumah apung, masyarakat terpencil/terasing, dan pengungsi. Bagi mereka yang mempunyai tempat tinggal tetap dan sedang bepergian ke luar wilayah lebih dari enam bulan, tidak dicacah di tempat tinggalnya, tetapi dicacah di tempat tujuannya. Untuk tahun yang tidak dilaksanakan sensus penduduk, data kependudukan diperoleh dari hasil proyeksi penduduk. Proyeksi penduduk merupakan suatu perhitungan ilmiah yang didasarkan pada asumsi dari komponen-komponen perubahan penduduk, yaitu kelahiran, kematian, dan migrasi. Proyeksi penduduk Indonesia 2010–2035 menggunakan data dasar penduduk hasil SP2010.

area community, and internally displaced persons. Those who had permanent residence and had been travelling away from their home for six months or more were not enumerated in their permanent place, but in the place where they were during the census.

For the periods where the population census is not conducted, population projection is done to estimate population during those years. The population projection is an estimate based on the demographic components, such as birth, death, and migration. Indonesia's 2010–2035 population projection used the 2010 Population Census as the base population.

38. Untuk mengukur kemiskinan, BPS menggunakan konsep kemampuan memenuhi kebutuhan dasar (*basic needs approach*). Dengan pendekatan ini, kemiskinan dipandang sebagai ketidakmampuan dari sisi ekonomi untuk memenuhi kebutuhan dasar makanan dan bukan makanan yang diukur dari sisi pengeluaran. Metode yang digunakan adalah menghitung Garis Kemiskinan (GK), yang terdiri dari dua komponen yaitu Garis Kemiskinan Makanan (GKM) dan Garis Kemiskinan Non-Makanan (GKNM). Penghitungan Garis Kemiskinan dilakukan secara terpisah untuk daerah perkotaan dan perdesaan.
39. **Penduduk miskin** adalah penduduk yang memiliki rata-rata pengeluaran per kapita per bulan di bawah Garis Kemiskinan.
40. **Garis Kemiskinan Makanan (GKM)** merupakan nilai pengeluaran kebutuhan minimum makanan yang disetarakan dengan 2.100 kkalori per kapita per hari. Garis Kemiskinan Non-Makanan (GKNM) adalah kebutuhan minimum untuk perumahan, sandang, pendidikan,
38. To measure poverty, BPS-Statistics Indonesia has used the concept of basic needs approach. Therefore, poverty is viewed as economic inability to fulfill food and non-food basic needs which are measured by consumption/expenditure. The method used is calculating poverty line, which consists of two components that are Food Poverty Line (FPL) and Non-Food Poverty Line (NFPL). The poverty line was calculated separately for urban and rural areas.
39. A person whose expenditure per capita per month is below the poverty line is considered to be poor.
40. **The Food Poverty Line** refers to the daily minimum requirement of 2,100 kcal per capita per day. The Non-Food Poverty Line refers to the minimum requirement for household necessities for clothing, education, health, and other basic individual needs.

kesehatan, dan kebutuhan dasar lainnya.

41. Ukuran Kemiskinan

- a. **Head Count Index** (HCI- P_0) adalah persentase penduduk miskin yang berada di bawah Garis Kemiskinan (GK).
- b. **Indeks Kedalaman Kemiskinan** (*Poverty Gap Index-P₁*) merupakan ukuran rata-rata kesenjangan pengeluaran masing-masing penduduk miskin terhadap garis kemiskinan. Semakin tinggi nilai indeks, semakin jauh rata-rata pengeluaran penduduk dari garis kemiskinan.
- c. **Indeks Keparahan Kemiskinan** (*Poverty Severity Index-P₂*) memberikan gambaran mengenai penyebaran pengeluaran di antara penduduk miskin. Semakin tinggi nilai indeks, semakin tinggi ketimpangan pengeluaran di antara penduduk miskin.

Foster-Greer-Thorbecke (1984) merumuskan suatu ukuran yang digunakan untuk mengukur tingkat kemiskinan sebagai berikut:

41. Poverty Measures

- a. **Head Count Index** ($HCI-P_0$) simply measures the percentage of the population that is counted as poor, often denoted by P_0 .
- b. **Poverty Gap Index- P_1** measures the extent to which individuals fall below the poverty line (the poverty gaps) as a proportion of the poverty line. Higher value of the index shows that the gap between average expenditure of the poor and the poverty line is wider.
- c. **Poverty Severity Index- P_2** describes inequality among the poor. This is simply a weighted sum of poverty gaps (as a proportion of the poverty line), where the weights are the proportionate poverty gaps themselves. Hence, by squaring the poverty gap index, the measure implicitly puts more weight on observations that fall well below the poverty line. Higher value of the index shows that inequality among the poor is higher.

Foster-Greer-Thorbecke (1984)

$$P_a = \frac{1}{n} \sum_{i=1}^q \left[\frac{z - y_i}{z} \right]^a$$

dimana:

$a=0, 1, 2$

z =Garis kemiskinan

y_i =Rata-rata pengeluaran perkapita sebulan penduduk yang berada di bawah garis kemiskinan ($i=1,2,\dots,q$), $y_i < z$

q =Banyaknya penduduk yang berada di bawah garis kemiskinan

n =Jumlah penduduk

Jika $a=0$, diperoleh *Head Count Index* (P_0), jika $a=1$ diperoleh indeks kedalaman kemiskinan (*Poverty Gap Index-P1*) dan jika $a=2$ disebut indeks keparahan kemiskinan (*Poverty Severity Index-P2*).

developed poverty measures that may be written as:

$$P_a = \frac{1}{n} \sum_{i=1}^q \left[\frac{z - y_i}{z} \right]^a$$

where:

$a=0, 1, 2$

z =the poverty line

y_i =Average expenditure per capita per month of the poor ($i=1,2,\dots,q$),

$y_i < z$

q =the number of poor

n =the total population

if $a=0$ is obtained Head Count Index (P_0), if $a=1$ is obtained Poverty Gap Index- P_1 , and if $a=2$ is obtained Poverty Severity Index- P_2 .

42. **Indeks Pembangunan Manusia (IPM)** menjelaskan bagaimana penduduk dapat mengakses hasil pembangunan dalam memperoleh pendapatan, kesehatan, pendidikan dan sebagainya.
