*Population and Labour*

---

### III. PENDUDUK

#### PENJELASAN TEKNIS

**1.** Sumber utama data kependudukan adalah Sensus Penduduk yang dilaksanakan setiap sepuluh tahun sekali. Sensus Penduduk telah dilaksanakan sebanyak enam kali sejak Indonesia merdeka yaitu tahun 1960, 1970, 1980, 1990, 2000 dan 2010. Selain Sensus Penduduk, untuk menjembatani ketersediaan data kependudukan diantara dua periode sensus, BPS melakukan Survei Penduduk Antar Sensus (SUPAS). SUPAS telah dilakukan sebanyak empat kali, tahun 1976, 1985, 1995 dan terakhir 2005. Data kependudukan selain Sensus dan SUPAS adalah proyeksi penduduk.

Di dalam sensus penduduk, pencacahan dilakukan terhadap seluruh penduduk yang berdomisili di wilayah teritorial Indonesia termasuk warga Negara asing kecuali anggota Korps Diplomatik beserta keluarganya. Berbeda dengan pelaksanaan sensus penduduk sebelumnya, Sensus Penduduk 2010 melaksanakan metode pencacahan lengkap termasuk pula anggota rumah tangga Korp Diplomatik RI yang tinggal di luar negeri.

### III. POPULATION

#### TECHNICAL NOTES

**I.** The main source of demographic data is Population Census, which is conducted every ten years. Population Census has been conducted six times since Indonesia's independence: 1960, 1970, 1980, 1990, 2000 and 2010. In addition to the Census, BPS also conducted Intercensal Population Survey, called SUPAS which is designed to proceed demographic data between two censuses. SUPAS has been conducted four times: 1976, 1985, 1995 and 2005. Besides Population Census and SUPAS, this report also uses population projection.

The population census enumerates all residents domicile in the entire territory of Republic of Indonesia including foreign citizenship except the diplomatic corps members and their families. The implementation of the 2010 Population Census was different from the previous censuses because it only carried out complete enumeration method covering more complete variables. As compared to the previous censuses, the 2010 Population Census only carried out the complete enumeration method included household members of the diplomatic corp of Indonesia living abroad.

Sensus Penduduk 2010 dilakukan serentak di seluruh tanah air mulai tanggal 1-31 Mei 2010. Metode pengumpulan data dilakukan dengan wawancara antara petugas sensus dengan responden. Cara pencacahan yang dipakai dalam sensus penduduk adalah kombinasi antara *de jure* dan *de facto*. Bagi penduduk yang bertempat tinggal tetap dipakai cara *de jure*, dicacah di mana mereka biasa tinggal, sedangkan untuk penduduk yang tidak bertempat tinggal tetap dicacah dengan cara *de facto*, yaitu dicacah di tempat di mana mereka ditemukan petugas sensus biasanya pada malam ‘Hari Sensus’. Termasuk penduduk yang tidak bertempat tinggal tetap adalah tuna wisma, awak kapal berbendera Indonesia, penghuni perahu/rumah apung, masyarakat terpencil/ terasing dan pengungsii.

Bagi mereka yang mempunyai tempat tinggal tetap, tetapi sedang bertugas ke luar wilayah lebih dari enam bulan, tidak dicacah di tempat tinggalnya. Sebaliknya, seseorang atau keluarga menempati suatu bangunan belum mencapai enam bulan tetapi bermaksud menetap di sana dicacah di tempat tersebut.

2. Penduduk adalah semua orang yang berdomisili di wilayah teritorial Republik Indonesia selama 6 bulan atau lebih dan atau mereka yang berdomisili kurang dari 6 bulan tetapi bertujuan menetap.

*The 2010 Population Census was simultaneously conducted in Indonesia territory from 1-31 May 2010. Data were collected by interviewing respondents in which the combination of *de jure* and *de facto* approaches were applied. *De jure* was applied to the permanent residents, while *de facto* was applied to non-permanent residents. The permanent residents were enumerated in place where they normally live, the non permanent residents were enumerated where they were found by the enumerators, usually on the night of ‘Census Day’. The non permanent residents include homeless people, ship crew, boat people, remote area community and internally displaced persons.*

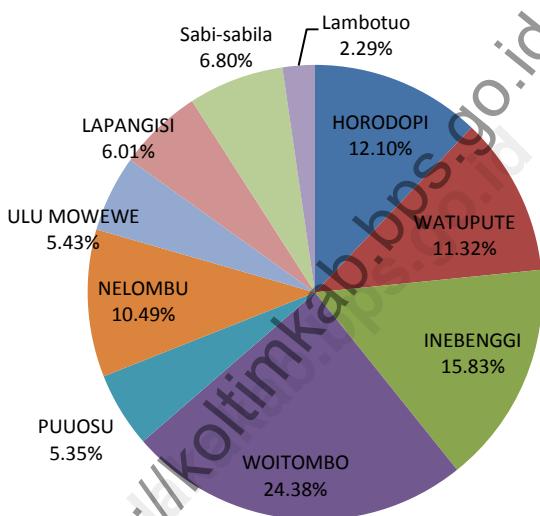

*For those who had permanent residence but had been away from their former home for six months or more were not enumerated in their permanent places. In contrast, someone or a family who moved to another place less than six months but intended to stay there were counted as population.*

2. *Population are all residents of the entire territory of Republic of Indonesia who have stayed for six months or longer, and those who intended to stay more than six months even though their length of stay is less than six months.*

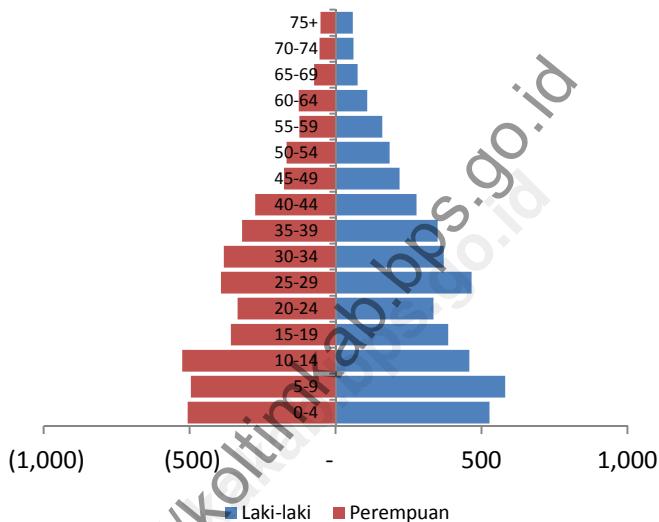

3. Kepadatan Penduduk adalah banyaknya penduduk per km persegi.  
*3. Population density is the number of people per square kilometer.*
4. Rasio Jenis Kelamin adalah perbandingan antara banyaknya penduduk laki-laki dengan banyaknya penduduk perempuan pada suatu daerah dan waktu tertentu. Biasanya dinyatakan dengan banyaknya penduduk laki-laki untuk 100 penduduk perempuan.  
*4. Sex Ratio is the ratio of the number of males to the number of females in a given area and time, usually expressed as the number of males for every 100 females.*
5. Struktur Umur, Jenis Kelamin dan Rumah Tangga : Struktur umur penduduk pada suatu daerah sangat ditentukan oleh perkembangan tingkat kelahiran, kematian dan migrasi.  
*5. Age structure, Sex, and Household The age structure of population is influenced by the fertility, mortality and migration rate.*

2. The main food crops data collected consists of area harvested and productivity (yield per hectare). Food crops production is generated by area harvested multiply by productivity. Food crops data covers Wetland Paddy, Dryland Paddy and secondary food crops (maize, soybeans, peanuts, Mung bean, cassava, and sweet potatoes). The area harvested data is collected every month by the Agriculture Extension Workers (called KCD for Kepala Cabang Dinas) and reported in Agriculture Statistics Form. Data collection is conducted by sub district area approach in all over Indonesia. Area harvested in each sub district is estimated based on the area harvested in each village in the sub district. Food crops productivity (yield per hectare) data are collected through

dilakukan melalui Survei Ubinan dengan menggunakan formulir SUB-S. Periode pengumpulan data dilakukan setiap *subround* (caturwulan/empat bulanan) dengan petugas lapangan adalah Mantri Statistik (Koordinator Statistik Kecamatan)/KSK dan KCD.

Pengumpulan data produktivitas tanaman pangan dilakukan secara sampel melalui survei ubinan dengan pendekatan rumah tangga. Metode pengumpulan data produktivitas menggunakan metode pengukuran langsung pada plot ubinan yang berukuran  $2\frac{1}{2}$  m x  $2\frac{1}{2}$  m. Pengumpulan data produktivitas dilakukan sesuai dengan waktu panen petani.
